

Governor's Honors Program
Engineering
Interview & Group Task Preparation
(2024)

Semifinalists in Engineering will participate in an individual interview w/ portfolio review and group task.

Engineering Portfolio:

- Must include examples (pictures, drawings, etc.) of the semifinalist's interests and work products in engineering (design, mechanical & electrical, or programming).
- Portfolios may also be presented on a device or electronic medium (i.e., mobile phone, tablet, or laptop) as long as the device does not exceed laptop size. *Projectors are not necessary and will not be permitted.* Semifinalists should be mindful that electronic portfolios or demonstrations must fit within the interview time limits. GHP cannot guarantee that internet access (e.g., Wi- Fi) will be available at the interview site.

Group Task:

- Groups of 3-6 students will be given an engineering problem to solve. The “solving” of this problem is second to the critical thinking displayed and group dynamics that students will show in a collaborative environment.
 - The group will be monitored by 1-2 observers.

While each student selects a specific concentration in engineering, students are exposed to each concentration/ field of engineering during the summer and are expected to participate in that learning openly and actively.

Semifinalists should anticipate being on-site for at least 1-2 hours.
