

# **Student Mobility in Georgia**

*Establishing Patterns and Predictors*

THE GOVERNOR'S OFFICE  
of STUDENT ACHIEVEMENT

Pascael Beaudette  
June 2014

This page intentionally left blank.

# Executive Summary

Each school year, thousands of Georgia students transfer schools for reasons other than grade promotion. Student mobility not only affects the individual student but also the teacher and students in his or her classes. This report utilizes data from the new statewide longitudinal data system, [GA•AWARDS](#), to assess mobility patterns in Georgia public schools during the 2012-13 academic year.

To count as “mobile” for the purposes of this analysis, students must have entered or withdrawn from a school between October 2 and May 1. October 2 is the Georgia Department of Education’s (GaDOE) fall enrollment count date. May 1 represents a consistent date that is prior to the end of the school year in all Georgia districts. Students who withdrew and reentered the same school within seven days are not counted as mobile.

To assess mobility at the school and district level, the Governor’s Office of Student Achievement (GOSA) calculated a churn rate for each school and district, which represents the number of student entries and exits during the school year divided by the number of students in the school on the Georgia Department of Education’s fall count date of October 2. In 2012-13, the average school churn rate was 23.0%, but the median rate was 16.9%. The rates ranged from 1.1% (Newton County Theme School at Ficquett) to 756.3% (DeKalb Alternative School). At the district level, the average churn rate was 17.5%, and the median rate was 14.8%.

Controlling for the region of the state, the presence of a military base, and demographic characteristics of the districts, regression analysis on school churn rates finds:

- As the percentage of Students with Disabilities (SWD) and Free/Reduced-Price Lunch (FRL) students increased, a school’s churn rate also increased.
- As the percentage of gifted students and the percentage of English Language Learner (ELL) students increased, the school’s churn rate decreased.
- The percentage of minority students, the region of the state, and the presence of military bases did not have a statistically significant relationship with school churn rates when holding constant other factors.

At the student level, of the 1.7 million public school students in the 2012-13 academic year, approximately 176,000 students, or 10.3%, were mobile during the school year. Among mobile students, 59.0% transferred to another public school within Georgia. Regression analysis on the likelihood an individual student was mobile finds:

- Students who qualified for FRL were 3.9% more likely to be mobile than non-FRL students.
- Differences in student mobility by race/ethnicity were minimal once other factors, such as FRL status, were held constant.
- SWD were 1.3% more likely to be mobile than non-SWD.
- Gifted students were 11.3% less likely to be mobile than non-gifted students.

While this study provides information on patterns in student mobility, many questions remain regarding the effects of student mobility. In particular, future studies should examine the relationship between student mobility and academic achievement and whether mobile students are moving to better, worse, or comparable schools.

Community Partnerships

# Introduction

Each school year, thousands of Georgia students transfer schools for reasons other than grade promotion. Student mobility not only affects the individual student but also the teacher and students in his or her classes. This report utilizes data from the new statewide longitudinal data system, [GA•AWARDS](#), to assess mobility patterns in Georgia public schools during the 2012-13 academic year.<sup>1</sup>

Transferring schools disrupts student learning. For the student, transferring schools places him or her into a new environment with different teachers, classmates, and curricula. Studies on mobility show that mobile students tend to underperform academically; however, mobile students also tend to belong to subgroups, such as low income students, English Language Learners (ELL), and Students with Disabilities (SWD), that also tend to underperform.<sup>2</sup> In addition, it is difficult to measure and disentangle the causes of student mobility from mobility in order to determine the causal effect on student achievement. Thus, the effect of mobility on student achievement is often unclear.

For teachers and classmates, student mobility disrupts the classroom environment. Teachers

must determine how best to serve new incoming students and manage the effects of changing classroom composition. Stable students must deal with the classroom disruption as mobile students enter and exit, and they often experience a slower pace of instruction as new students are incorporated into the class. Student mobility also imposes administrative costs, as schools must transfer or obtain student records.

Although student mobility affects students, teachers, and schools, very little is known about student mobility in Georgia. Using data from GA•AWARDS, this report analyzes mobility at the student, school, and district levels. It does not examine the causal relationship between mobility and student achievement.

This report begins with a description of the data and methodology. The third section includes an analysis of mobility at the school and district level, including calculating 2012-13 churn rates for each school and district in the state. The fourth section examines the correlation between certain demographic indicators and student mobility and presents a student-level regression analysis. The report concludes with a summary and avenues for further research.

“Mobile students tend to underperform academically; however, mobile students also tend to belong to subgroups that also tend to underperform. Thus, the effect of mobility on student achievement is often unclear.”

# Data and Methodology

This analysis utilizes data on every public K-12 student in Georgia in 2012-13, which is housed in GA•AWARDS. It uses an anonymous GA•AWARDS unique identifier (ID) at the student level that is assigned to the data when it is received from the Georgia Department of Education (GaDOE).

The unit of observation is GA•AWARDS unique ID per school entry date. In other words, each time a student has a new school entry date, he or she represents another observation. For the 2012-13 school year, there were approximately 1.85 million observations and 1.7 million unique students.

Demographic information is not always consistent across observations. For example, a student's listed race/ethnicity sometimes changes when he or she moves. This may occur because one parent registered the child at the first school as one race/ethnicity, and the other parent registered the child at his second school under another race/ethnicity. Or, the change could be a data entry error. For the purposes of this analysis, a student's race/ethnicity is the last race/ethnicity listed.

**“To count as “mobile” for the purposes of this analysis, students must have entered or withdrawn from a school between October 2 and May 1. Students who withdrew and reentered the same school within seven days are not counted as mobile.”**

Student classifications in other subgroups, such as Free and Reduced-Price Lunch (FRL), SWD, gifted, and ELL, also sometimes change within a school year. If the student is identified in one of these categories once during the year, he or she is considered a part of that subgroup in this analysis because these students are likely more similar to students in that subgroup than those not in the subgroup.

To count as “mobile” for the purposes of this analysis, students must have entered or withdrawn from a school between October 2 and May 1. October 2 is the Georgia Department of Education's (GaDOE) fall enrollment count date. May 1 represents a consistent date that is prior to the end of the school year in all Georgia districts. Students who withdrew and reentered the same school within seven days are not counted as mobile. It should be noted that the entry data and withdrawal data do not necessarily reflect the actual date of enrollment and withdrawal. Rather, it is the date that the school entered or removed the student in the student information system.

GOSA also analyzed data from the 2010-11 and 2011-12 school years, and the patterns are consistent with the 2012-13 results. Consequently, only 2012-13 results are presented in this report.<sup>3</sup>

# School and District Churn Rates

This section measures the percentage of a school's or district's students who entered or exited during the school year. This measure of "churn" shows the stability of a school or district's student population within the school year. This section presents school and district churn rates and analyzes statewide churn patterns by Regional Educational Service Area (RESA) and demographics.

## ***Churn Rate Formula***

To develop the churn rate, GOSA used a formula similar to one used in a 2012 study on Ohio conducted for the Thomas B. Fordham Institute.<sup>4</sup> The numerator in the churn rate uses the same definition of mobility as discussed above, where the numerator increases by one each time a student entered or withdrew from a school between the GaDOE's fall enrollment count date (October 2) and May 1.<sup>5</sup> Students who withdrew and reentered the same school within seven days were not included. The denominator is the number of students in the school on the GaDOE's fall enrollment count date. The district level churn rates simply roll up the school-level data.

## ***State-Level Churn Rate***

In 2012-13, the average school churn rate was 23.0%, but the median rate was 16.9%. The average churn rate was significantly higher than the median primarily because several alternative

schools were outliers with high churn rates. Consequently, the median is a better measure of statewide churn, meaning that generally 16.9% of students in a school were mobile during the 2012-13 school year.

The rates ranged from 1.1% (Newton County Theme School at Fickett) to 756.3% (DeKalb Alternative School). Forty-one schools—all alternative schools—had churn rates greater than 100.0%. 95% of schools had a churn rate of less than 44.0%.

Using GOSA churn rate calculations, [Neighborhood Nexus](#) and [Emory University's Center for Community Partnerships](#) mapped the district churn rates, as presented on the following page. In general, school districts in metro Atlanta and those near military bases exhibited the highest churn rates, while many city districts and counties in south central Georgia had lower churn rates.

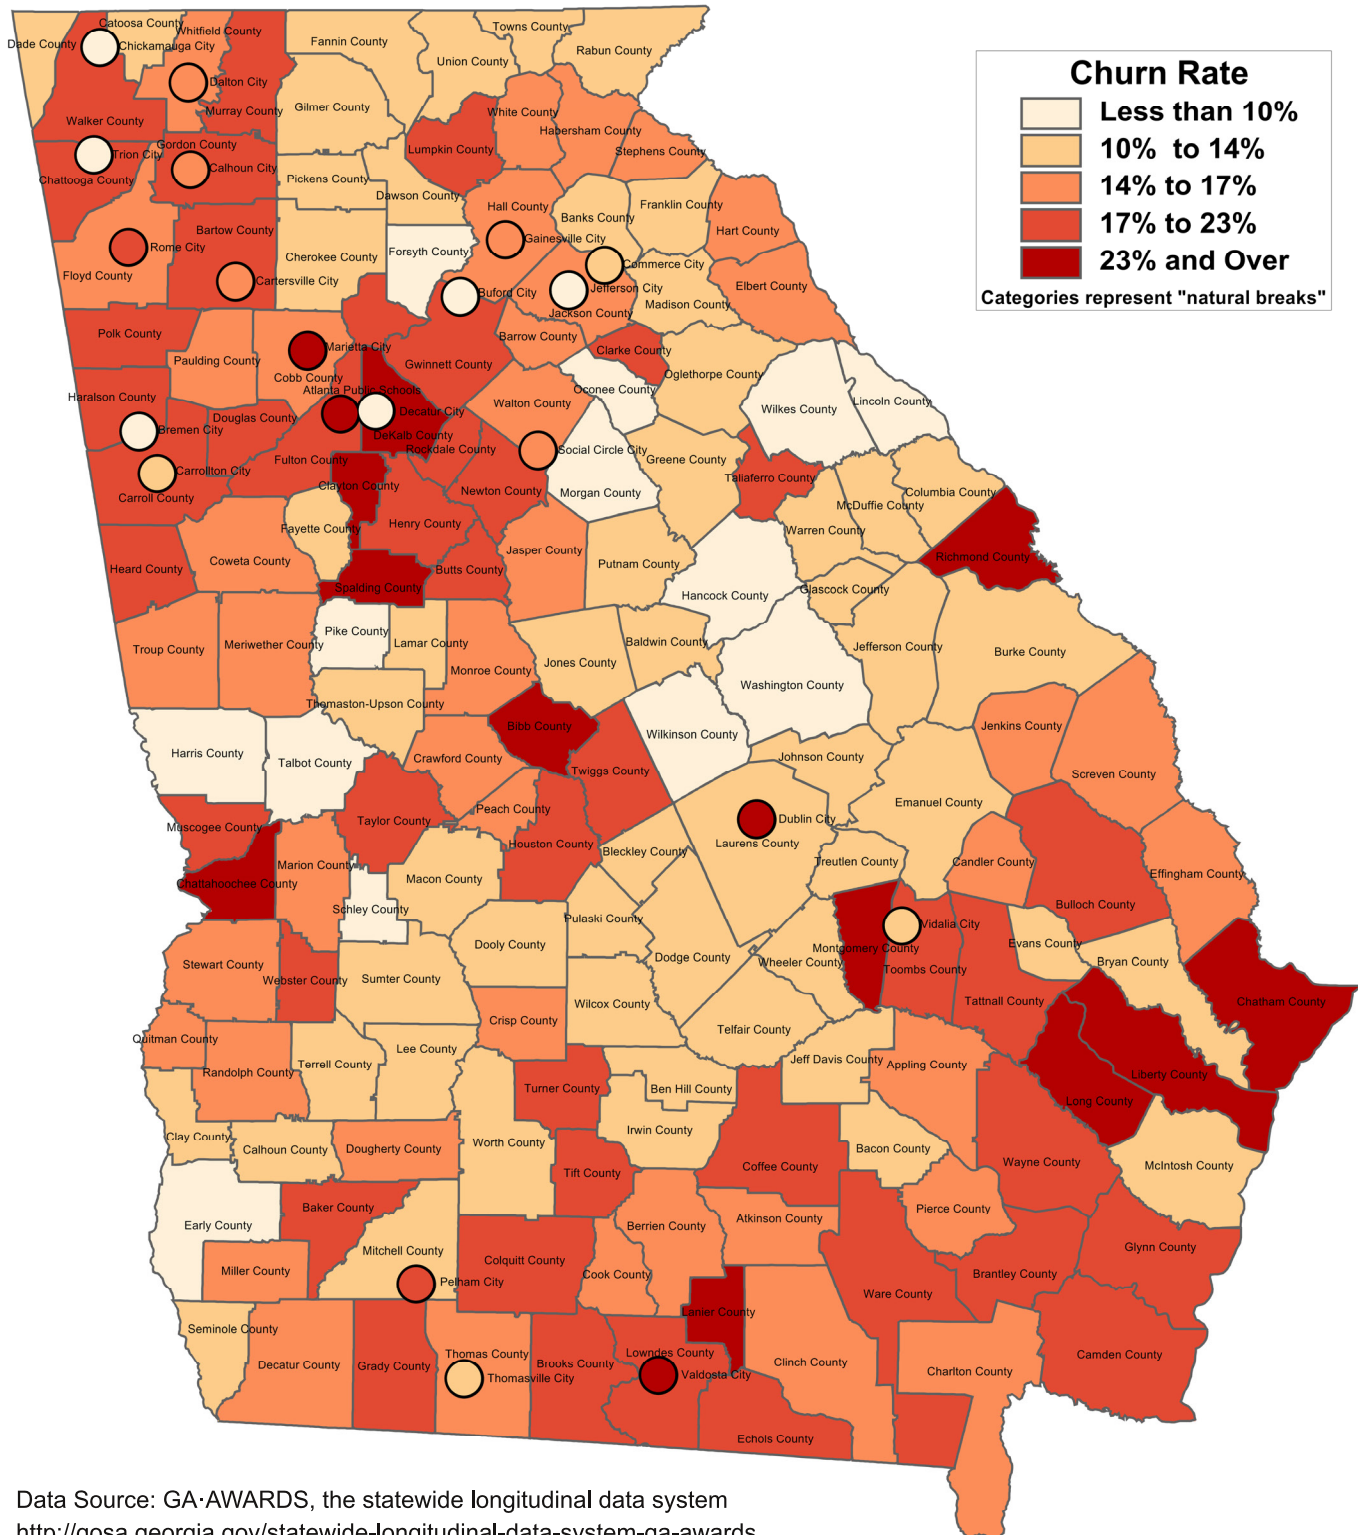

At the district level, the average churn rate was 17.5%, and the median rate was 14.8%. The rates ranged from 3.4% to 289.2%.<sup>6</sup> Only the Provost Academy of Georgia, a state virtual charter school, had a churn rate above 100% (289.2%). 95% of districts had a churn rate less than 27.3%.

Appendices A and B contain the school and system churn rates for 2012-13.

$$\text{School Churn Rate} = \frac{\text{Number of student entries and exits between October 2, 2012 and May 1, 2013}}{\text{Number of students in the school on October 2, 2012}}$$

$$\text{District Churn Rate} = \frac{\text{Number of school - level student entries and exits between October 2, 2012 and May 1, 2013}}{\text{Number of students in the district on October 2, 2012}}$$

# 2012-13 District Churn Rates

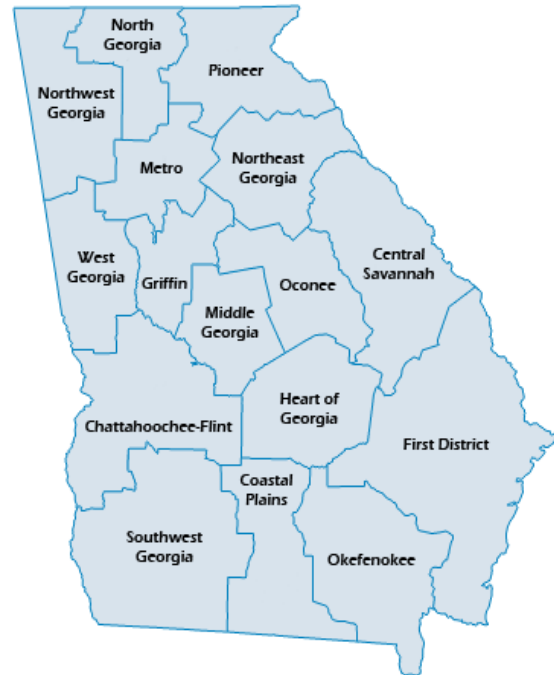

The churn rate is defined as the number of students who enter or exit a school between 10/2/2012 and 5/1/2013 and do not reenter the same school within 7 days, divided by the number of students in the district on 10/2/2012.

## Churn Rate by RESA

Georgia school districts are divided by location into 16 RESAs.<sup>7</sup> Table 1 below presents the average and median school level churn rate by RESA. First District RESA in southeast Georgia had the highest median school-level churn rate of 20.2%, followed by the Metro and Okefenokee RESAs with average churn rates of 20.0% and 18.7%, respectively. Oconee RESA, which serves the counties of Baldwin, Hancock, Johnson, Putnam, Washington and Wilkinson in central Georgia, had the lowest median churn rate of 10.6%.

In all RESAs, the average churn rate was higher than the median rate. The difference is particularly stark for the Heart of Georgia RESA, primarily because 2 of its 40 schools had churn rates above 100% (Middle Georgia Wilderness Institute and Community Hope Center).

Figure 1: RESA Map

Table 1: Churn Rate by RESA

| RESA                   | Average Churn Rate | Median Churn Rate | Number of Schools |
|------------------------|--------------------|-------------------|-------------------|
| Central Savannah River | 21.4%              | 18.4%             | 127               |
| Chattahoochee-Flint    | 22.8%              | 17.7%             | 99                |
| Coastal Plains         | 23.6%              | 18.3%             | 74                |
| First                  | 23.6%              | 20.2%             | 183               |
| Griffin                | 21.5%              | 16.8%             | 136               |
| Heart of Georgia       | 33.9%              | 13.0%             | 40                |
| Metro                  | 26.9%              | 20.0%             | 759               |
| Middle Georgia         | 26.3%              | 18.4%             | 107               |
| North Georgia          | 17.4%              | 14.5%             | 94                |
| Northeast Georgia      | 17.8%              | 13.7%             | 111               |
| Northwest Georgia      | 17.9%              | 16.2%             | 166               |
| Oconee                 | 10.7%              | 10.6%             | 24                |
| Okefenokee             | 19.5%              | 18.7%             | 47                |
| Pioneer                | 19.6%              | 14.1%             | 114               |
| Southwest Georgia      | 16.5%              | 14.1%             | 88                |
| West Georgia           | 19.5%              | 16.4%             | 97                |

## Churn Rates and Student Demographics

This section examines the relationships between demographic information and mobility at the school level.

### School Churn Rates and Percent FRL

In general, a school's churn rate increased as the percentage of students qualified for FRL increased. The figure below shows the scatterplot of churn rates and the percentage of students who qualified for FRL.<sup>8</sup>

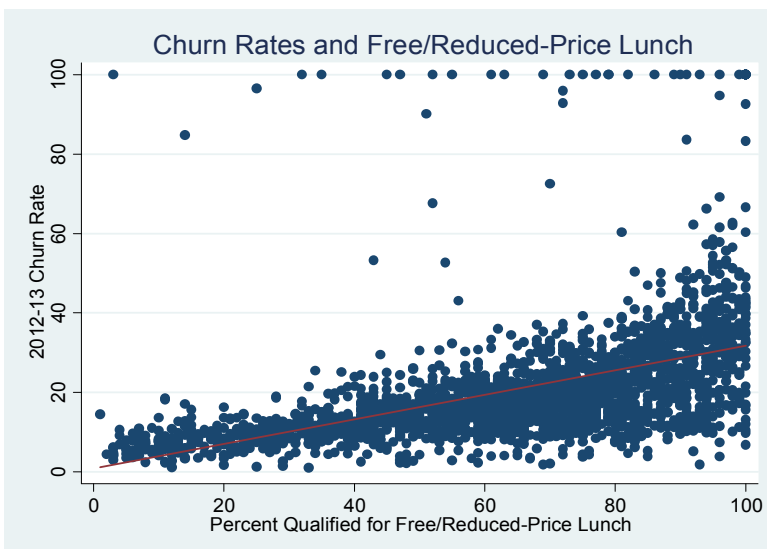

This pattern is apparent when comparing low-poverty schools (25% or less FRL students) with high-poverty schools (75% or more FRL students).<sup>9</sup> The median churn rate in low-poverty schools was 7.6% (204 schools). In high-poverty schools, the median rate almost tripled to 25.7% (899 schools). 39.0% of all high-poverty schools are located within Metro RESA, but this RESA also contains 67.2% of all low-poverty schools. In five RESAs, a majority of schools are high poverty. Low-poverty schools are not a majority in any RESA. Table 2 compares the median churn rates of high- and low-poverty schools in each RESA.<sup>10</sup>

Table 2: Geographic Distribution of High and Low Poverty Schools

| RESA                   | Total Schools | High Poverty Schools | Median Churn Rate | Low Poverty Schools | Median Churn Rate |
|------------------------|---------------|----------------------|-------------------|---------------------|-------------------|
| Central Savannah River | 127           | 70                   | 22.1%             | 11                  | 8.3%              |
| Chattahoochee-Flint    | 99            | 69                   | 20.5%             | 3                   | 2.8%              |
| Coastal Plains         | 74            | 28                   | 21.8%             | 0                   | -                 |
| First                  | 183           | 59                   | 25.6%             | 2                   | 9.3%              |
| Griffin                | 136           | 36                   | 27.8%             | 18                  | 8.6%              |
| Heart of Georgia       | 40            | 21                   | 14.9%             | 1                   | 84.8%             |
| Metro                  | 759           | 351                  | 32.2%             | 137                 | 7.2%              |
| Middle Georgia         | 107           | 45                   | 27.8%             | 2                   | 8.5%              |
| North Georgia          | 94            | 27                   | 18.5%             | 14                  | 8.5%              |
| Northeast Georgia      | 111           | 24                   | 19.2%             | 7                   | 8.8%              |
| Northwest Georgia      | 166           | 30                   | 24.5%             | 6                   | 5.5%              |
| Oconee                 | 24            | 16                   | 11.5%             | 0                   | -                 |
| Okefenokee             | 47            | 23                   | 25.1%             | 0                   | -                 |
| Pioneer                | 114           | 20                   | 18.8%             | 0                   | -                 |
| Southwest Georgia      | 88            | 56                   | 16.0%             | 0                   | -                 |
| West Georgia           | 97            | 22                   | 22.6%             | 3                   | 8.4%              |
| <b>All Schools</b>     | <b>2,271</b>  | <b>899</b>           | <b>25.7%</b>      | <b>204</b>          | <b>7.6%</b>       |

“In general, a school's churn rate increased as the percentage of students qualified for FRL increased.”

Figure 2: Churn Rates and FRL

### *School Churn Rates and Minority Students*

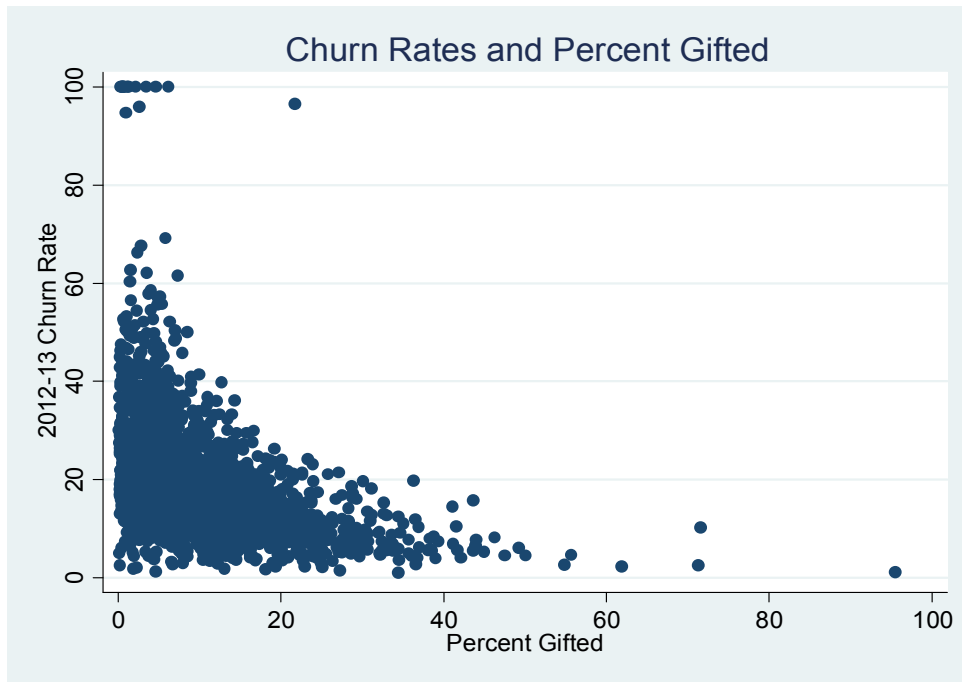

A similar pattern existed between churn rates and the percentage of minority students—schools with a higher percentage of minority students tended to have higher churn rates. Schools in which a 50% or more of students were white had a median churn rate of 13.4% (1,041 schools). In schools with a majority of minority students, the median churn rate was 21.4% (1,230 schools). This relationship does not factor in FRL status, which is considered in the next section.

### *School Churn Rates and Gifted Students*

Plotting churn rates against the percent gifted showed the opposite pattern. When the percentage of gifted students was small, schools had high and low churn rates. However, when the percentage of gifted students was high, churn rates were low.<sup>11</sup> The following figure shows this relationship.<sup>12</sup>

“When the percentage of gifted students was small, schools had high and low churn rates. However, when the percentage of gifted students was high, churn rates were low.”

*Figure 3: Churn Rates and Percent Gifted*

## Regression Analysis on School Churn Rates

To isolate the effects of the abovementioned demographic variables and other probable predictors of mobility at the school level, GOSA used following model:<sup>13</sup>

School Churn Rate

$$\begin{aligned}
 &= \beta_0 + \beta_1 * (\text{Percent FRL}) + \beta_2 * (\text{Percent SWD}) + \beta_3 * (\text{Percent ELL}) \\
 &+ \beta_4 * (\text{Percent Gifted}) + \beta_5 * (\text{Percent Minority}) + \beta_6 * (\text{Metro Atlanta}) \\
 &+ \beta_7 * (\text{North Georgia}) + \beta_8 * (\text{Middle Georgia}) + \beta_9 * (\text{Military}) \\
 &+ \beta_{10} * (\text{Change in Unemployment Rate}) + \beta_{11} * (\text{School Size}) \\
 &+ \beta_{12} * (\text{Log(County Population)}) \\
 &+ \beta_{13} * (\text{County Median Income as \% of State Median Income}) + \epsilon
 \end{aligned}$$

The first five variables are the percentage of the student population in each of those subgroups as defined on [GOSA's Report Card](#). Based on the summary statistics presented above, mobility is expected to increase as the percentage of FRL, SWD, ELL, and minority students in the school increase.<sup>14</sup> The percentage of gifted students in the school is expected to have the opposite effect.<sup>15</sup>

To control for regional variation, Metro Atlanta, North Georgia, and Middle Georgia are indicator variables for the schools' location.<sup>16</sup> South Georgia is the omitted category. Since military families are often highly mobile, a military variable is included that indicates a military base is within the metropolitan area of the school's district.<sup>17</sup>

The change in unemployment rate is included to control for variation caused by job loss. This variable measures the difference in the school's county unemployment rate from June 2012 to June 2013.<sup>18</sup> If students are moving to accommodate parental employment relocation or financial struggles associated with job loss, this variable will have a positive coefficient. In general, unemployed Americans move more than those who are employed.<sup>19</sup>

To control for the size of the school, school enrollment counts are included in the model.<sup>20</sup> Because small schools have fewer students in the denominator of the churn rate, small changes in the numerator have a larger impact on the overall churn rate.

The model also controls for the population of the county in which the school's district is predominantly located.<sup>21</sup> Analysis of national mobility patterns has shown that urban and suburban residents are more mobile than those living in rural areas.<sup>22</sup> Because a large gap exists between the minimum and maximum values of this variable, the log transformation of this number is used.<sup>23</sup>

As a proxy for wealth in the surrounding community, the median household income in the school's county as a percentage of the state median household income is included.<sup>24</sup> National data show that individuals with higher household incomes are less likely to move.<sup>25</sup>

It should be noted that this regression model is not intended to measure the causes of changes in the churn rate. Rather, the goal is to estimate what factors predict changes in the churn rate.

Table 3 (found on the next page) provides summary statistics of these variables for the observations included in the regression. GOSA calculated 2012-13 churn rates for 2,271 schools. However, the regression analysis does not include 103 schools due to missing data, mostly on the percent gifted variable. A list of the schools dropped from the regression is included in Appendix C.

*Table 3: Summary Statistics at the School Level*

| Variable                          | Mean  | Median | Std. Dev. | Min  | Max    |
|-----------------------------------|-------|--------|-----------|------|--------|
| 2012-13 Churn Rate                | 20.5  | 16.7   | 24.3      | 1.1  | 756.3  |
| Percent FRL                       | 63.6  | 67     | 24.2      | 1.0  | 100.0  |
| Percent SWD                       | 10.6  | 10.3   | 3.9       | 0.0  | 83.1   |
| Percent LEP                       | 6.8   | 3      | 11.3      | 0.0  | 85.0   |
| Percent Gifted                    | 10.1  | 8.2    | 8.5       | 0.1  | 95.5   |
| Percent Minority                  | 56.6  | 54     | 29.7      | 2.0  | 100.0  |
| Metro Atlanta                     | 0.3   | 0      | 0.5       | 0.0  | 1.0    |
| North Georgia                     | 0.2   | 0      | 0.4       | 0.0  | 1.0    |
| Middle Georgia                    | 0.2   | 0      | 0.4       | 0.0  | 1.0    |
| Military                          | 0.2   | 0      | 0.4       | 0.0  | 1.0    |
| Change in Unemployment Rate       | -0.3  | -0.3   | 0.6       | -2.4 | 4.4    |
| School Enrollment                 | 740.3 | 640    | 428.6     | 9.0  | 3568.0 |
| County Population (Log)           | 11.8  | 11.8   | 1.4       | 7.9  | 13.8   |
| County Median Income (% of State) | 102.0 | 105.2  | 25.6      | 55.5 | 185.5  |

“The average school churn rate was 23.0%, but the median rate was 16.9%. At the district level, the average churn rate was 17.5%, and the median rate was 14.8%. ”

The table below presents the coefficients and robust standard errors for the regression model.

*Table 4: Regression Results at the School Level*

| Variable                           | Coeff.   | Robust SE |
|------------------------------------|----------|-----------|
| Percent FRL                        | 0.256*   | (0.034)   |
| Percent SWD                        | 1.539*   | (0.512)   |
| Percent ELL                        | -0.182*  | (0.038)   |
| Percent Gifted                     | -0.314*  | (0.056)   |
| Percent Minority                   | -0.025   | (0.027)   |
| Metro                              | -0.380   | (1.958)   |
| North Georgia                      | -0.681   | (1.145)   |
| Middle Georgia                     | -1.201   | (0.792)   |
| Military                           | 0.718    | (1.026)   |
| Change in Unemployment Rate        | 0.102    | (0.516)   |
| School Enrollment                  | -0.007*  | (0.002)   |
| Log County Population              | 4.455*   | (0.523)   |
| County Median Income as % of State | 0.039*   | (0.016)   |
| Constant                           | -60.089* | (10.079)  |
| N                                  |          | 2,168     |
| R-sq                               |          | 0.238     |
| F-Statistic                        |          | 41.98*    |
| * p<0.05                           |          |           |

Among the school demographic variables in the model, the percentage of SWD had the strongest relationship with the school's churn rate. The churn rate increased by 1.54 percentage points for each percentage point increase in students with disabilities, holding constant the other variables in the model. In other words, a change from the 25<sup>th</sup> percentile in terms of percentage SWD (8.3%) to the 75<sup>th</sup> percentile (12.5%) resulted in a 6.5 percentage point increase in the predicted churn rate.

The level of poverty in the student body also correlated strongly with mobility. For each one-point increase in the percentage of students qualified for FRL, the churn rate increased by 0.26 percentage point, all else constant. In other words, as a school went from a low poverty school to a high poverty school, the predicted churn rate increased by 12.8 percentage points.<sup>26</sup>

Conversely, as the percentage of ELL students and gifted students increased, the churn rate decreased. A school at the 75<sup>th</sup> percentile in terms of the percentage of gifted students (13.3%) had a predicted churn rate of 2.9 percentage points lower than a school at the 25<sup>th</sup> percentile (4.2%). For each percentage point increase in the ELL population, the expected churn rate fell by 0.18 percentage points. A school in the 75<sup>th</sup> percentile in terms of ELL students (8.0%) had an expected churn rate that is 1.27 percentage points lower than a school in the 25<sup>th</sup> percentile (1.0%). The percentage of minority students did not have a statistically significant effect.

As the size of the school increased, the churn rate decreased. However, the effect was small (-0.007), meaning the churn rate decreased by 0.7 percentage points for every 100 additional students in a school. Conversely, as the county population increased, so did the school's churn

**“The percentage of SWD had the strongest relationship with the school's churn rate. The churn rate increased by 1.54 percentage points for each percentage point increase in students with disabilities.”**

rate, but again the effect was small. A 50% increase in the county's population resulted in a churn rate this was only 1.81 percentage point higher.<sup>27</sup>

The model also includes the county's median household income as a percentage of the state median income, which showed a small, positive effect (0.039). In other words, as the county's median household income increased, so did the churn rate. Moving from the 25<sup>th</sup> percentile (81.4%) to the 75<sup>th</sup> percentile (124.0%) increased the predicted churn rate by only 1.66 percentage points.

The change in the county unemployment rate, the regional location, and the presence of a military base did not have a statistically significant relationship.

# Student-Level Mobility in Georgia

This section describes patterns in mobility at the student level, in particular the reason for moving and the timing and differences in mobility rates among subgroups. The section concludes with a regression analysis of individual mobility.

Of the 1.7 million public school students in the dataset, approximately 176,000 students, or 10.3%, were mobile during 2012-13 school year. Among mobile students, 59.0% transferred to another public school within Georgia. The top six reasons for transferring out of a Georgia public school are listed below in Table 5.

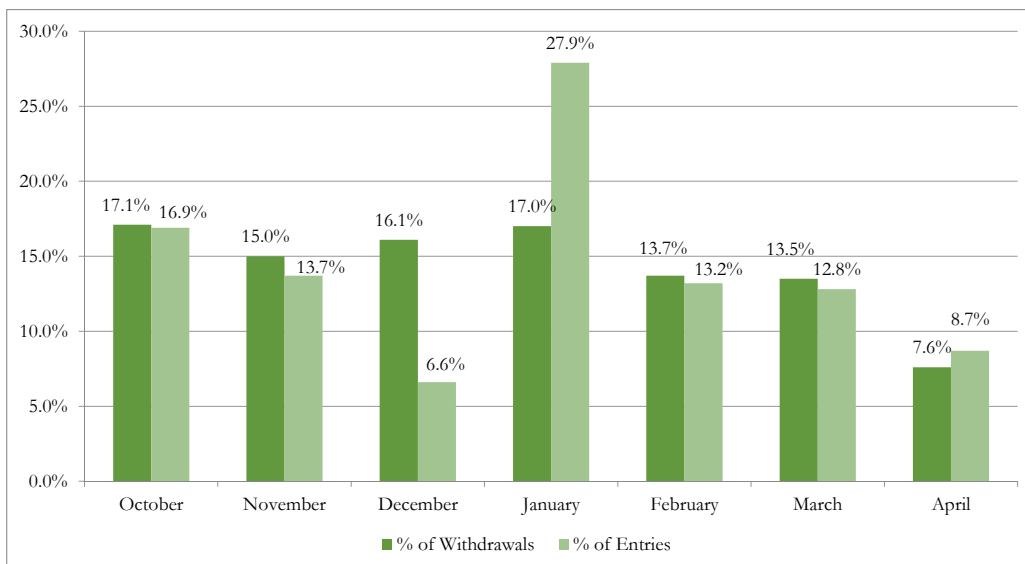

## ***Mobility by Month***

Students withdrew from schools at similar rates in each month during the year, with the exception of April, when a relatively smaller percentage of students withdrew. The distribution of student entries was not as evenly distributed, with a spike in January but relatively few in December and April. Figure 4 below shows the distribution of exits and entries by month. As noted previously, the entry data and withdrawal data do not necessarily reflect the actual date of enrollment and withdrawal. Rather, it is the date that the school entered or removed the student in the student information system.

*Table 5: Top Reasons for Mobility*

| Reason for Moving  | Percent of All Exits |
|--|----------------------|
| Transferred to another GA public school outside district | 35.0%                |
| Transferred within district                              | 24.0%                |
| Transferred out of state or country                      | 17.2%                |
| Unknown  | 6.6%                 |
| Removed for Lack of Attendance                           | 4.5%                 |
| Attended Home Study                                      | 3.7%                 |
| Miscellaneous Other Reasons                              | 9.0%                 |

*Figure 4: Mobility Timing*

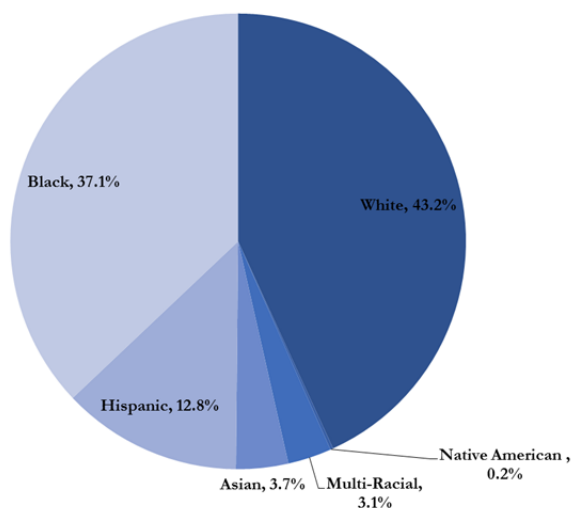

### ***Mobility by Race/Ethnicity***

Native American and black students were the most mobile subgroups, with 13.6% of Native American students and 13.3% of black students moving at least once during the school year. White and Asian students were the least mobile, with 7.8% and 8.6% in those groups, respectively, transferring schools during 2012-13.

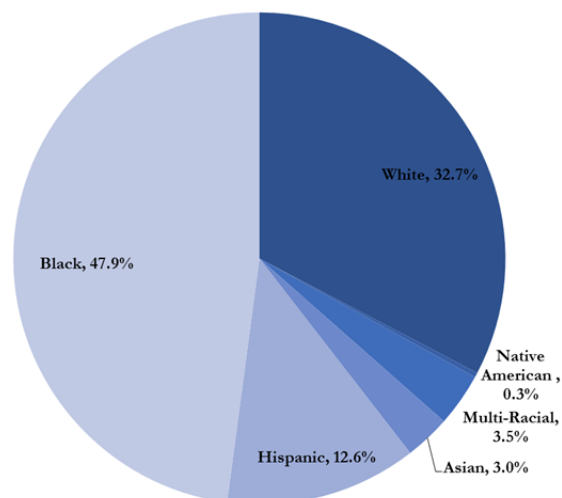

These patterns held when comparing the race/ethnicity breakdown in the total student population to the racial/ethnic breakdown in the mobile population, as seen in the figure below.<sup>28</sup> Black students comprised 37.1% of the student population but accounted for 47.9% of the mobile students. Conversely, white students comprised 43.2% of all students, but only 32.7% of mobile students were white.

*Figure 5: Total Population and Mobile Population by Race/Ethnicity*

**Georgia Public School Students by Race**

**Mobile Students by Race**

“Black students comprised 37.1% of the student population but accounted for 47.9% of the mobile students. Conversely, white students comprised 43.2% of all students, but only 32.7% of mobile students were white.”

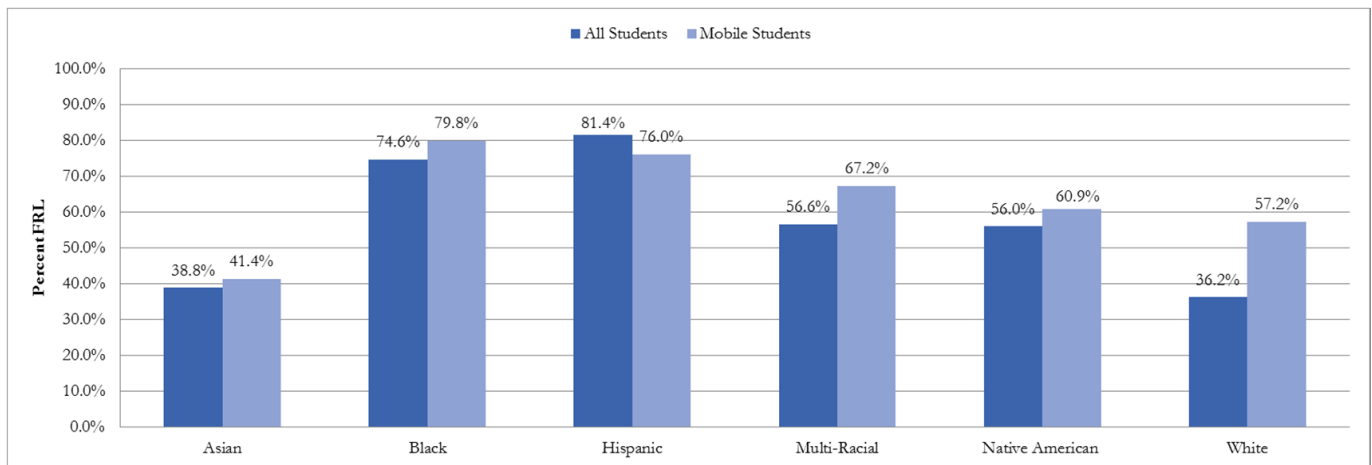

### ***Mobility among Students Who Qualify for FRL***

Fifty-seven percent of Georgia students qualified for FRL in 2012-13. FRL students were significantly more likely to be mobile; 12.7% of FRL students moved during the year, compared with 7.1% of non-FRL students.<sup>29</sup>

This pattern generally held when broken down by race/ethnicity. Figure 6 below compares the percentage of all students who qualified for FRL to the percentage of mobile students qualified for FRL by race/ethnicity.

With the exception of Hispanic students, FRL students were more likely to move than non-FRL students within each racial/ethnic group.<sup>30</sup> The difference between FRL and non-FRL students was particularly large among white students. In the overall population, 36.2% of white students qualified for FRL, but 57.2% of mobile white students qualified for FRL. Based on this figure, it appears that FRL status is at least partially driving racial/ethnic differences in mobility, but regression analysis is needed to parse out the effects.

*Figure 6: Mobility by Race/Ethnicity and FRL Status*

“FRL students were significantly more likely to be mobile; 12.7% of FRL students moved during the year, compared with 7.1% of non-FRL students.”

## Other Student Characteristics

Figure 7 displays the differences in mobility between students in other subgroups, including ELL, SWD, and gifted students. It also includes percentages by grade cluster (elementary, middle, and high school).

ELL students comprised 7.0% of Georgia students in 2012-13. ELL students were slightly more mobile than non-ELL students (11.4% compared with 10.2%).<sup>31</sup>

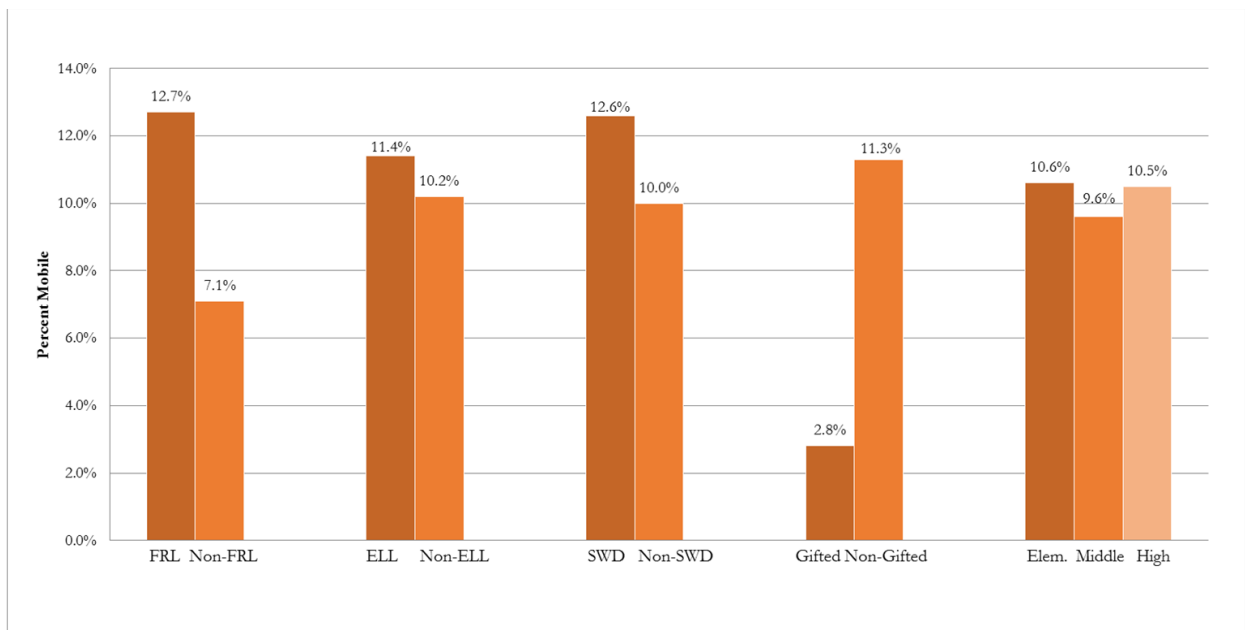

SWD were also more likely to move than non-SWD. 12.6% of SWD were mobile, compared with 10.0% of students who were not identified as SWD.<sup>32</sup> In 2012-13, 11.5% of Georgia students were identified as SWD.

Gifted students were far less mobile than non-gifted students.<sup>33</sup> Only 2.8% of gifted students were mobile, compared with 11.3% of non-gifted students. Gifted students were also much less likely to be FRL students. While 57.0%

of Georgia public school children qualified for FRL, only 26.4% of gifted students qualified. Consistent with the patterns seen above, FRL status may play a significant role in the mobility of gifted students. Roughly half of all gifted students who were mobile also qualified for FRL. Compared with the mobile population, gifted students were more likely to transfer between semesters. More specifically, they were more likely to withdraw in December (21.7% compared with 16.1%) and enter a new school in January (35.8% compared with 27.9%).<sup>34</sup>

Elementary and high school students were slightly more mobile than middle school students. 10.6% of elementary and 10.5% of high school students were mobile, compared with 9.6% of middle school students.<sup>35</sup> Compared with all mobile students, high school students were more likely to enter a new school in January (34.4% compared with 27.9%) and to withdraw from a school in January (20.4% compared with 17.0%).<sup>36</sup>

*Figure 7: Mobility by other Subgroups*

## Student-Level Regression Analysis

As mentioned above, regression analysis is needed to isolate the relationship between the above variables and student mobility. Logistic regression allows for the examination of the effect of each variable on the likelihood that a student is mobile, while holding the other variables constant. The model includes free and reduced-price lunch status, disability status, English Language Learner status, gifted status, grade cluster, and race/ethnicity as follows:<sup>37</sup>

$$\Pr(\text{Mobility}_i=1)$$

$$\begin{aligned}
 = & \Lambda(\beta_0 + \beta_1*(\text{FRL}) + \beta_2*(\text{SWD}) + \beta_3*(\text{ELL}) + \beta_4*(\text{Gifted}) \\
 & + \beta_5*(\text{Middle}) + \beta_6*(\text{High}) + \beta_7*(\text{Asian}) + \beta_8*(\text{Black}) \\
 & + \beta_9*(\text{Hispanic}) + \beta_{10}*(\text{Native American}) + \beta_{11}*(\text{Multi-Racial}) \\
 & + \beta_{12}*(\text{Middle School Student}) + \beta_{13}*(\text{High School Student}) + \epsilon)
 \end{aligned}$$

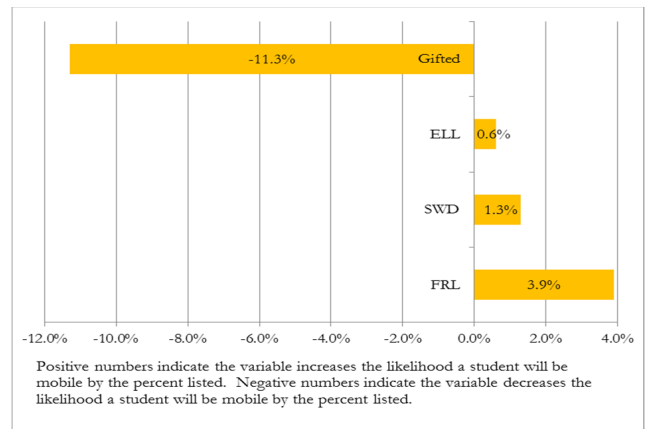

where  $\Lambda$  represents the standard logistic distribution. White students are the reference category for race/ethnicity, and elementary students are the reference category for grade cluster. Coefficients from this model must be converted to probabilities. The probabilities are presented below, and the coefficients are presented in Appendix D.<sup>38</sup>

Of the variables included in the model, being gifted had the largest marginal effect on mobility. On average, gifted students were 11.3% less likely to be mobile than non-gifted students, holding constant the other variables in the model. FRL status had the second largest effect. FRL students were 3.9% more likely to be mobile than non-FRL students. Interestingly, FRL status decreased the likelihood a gifted student will move by 3.7%.<sup>39</sup> ELL students and SWD were 0.6% and 1.3% more likely to be mobile, respectively, compared with students not in those subgroups.

The summary statistics indicated that student mobility patterns differed by race/ethnicity. However, once the other variables in the model are held constant, the effect of qualifying for

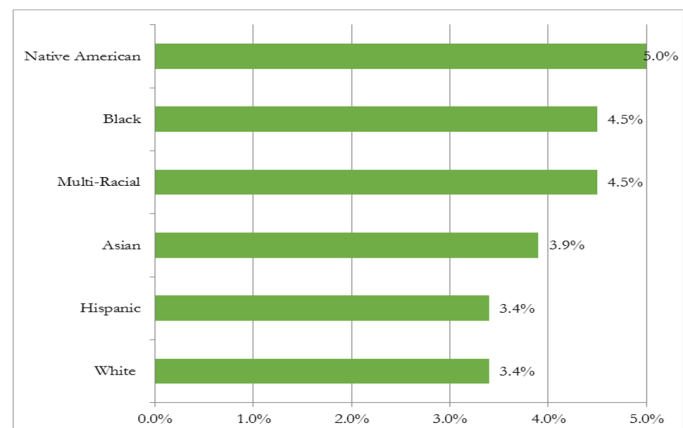

FRL had a fairly consistent effect on mobility across races. The greatest disparity was between Native American students and white or Hispanic students, but even here the effect of FRL differed only by 1.6 percentage points.<sup>40</sup>

Figure 8: Substantive Effects of Select Demographic Variables

“Once the other variables in the model are held constant, the effect of qualifying for FRL had a fairly consistent effect on mobility across races.”

Figure 9: Increased Likelihood of Mobility Due to FRL Status

# Conclusion

Student mobility affects all students, teachers, and schools. However, prior to this study, little was known about student mobility in Georgia. This report utilizes data from GA•AWARDS to analyze student mobility at the individual, school, and district levels.

The median school had a 2012-13 churn rate of 16.9%, but variation among schools is great. The lowest school churn rate was 1.1%, and 41 schools, all alternative schools, had churn rates above 100%. In the school-level regression, as the percentage of SWD and FRL students increased in a school, the school's churn rate also increased. However, as the percentage of ELL and gifted students increased, the churn rate decreased. The percentage of minority students was not a statistically significant predictor of school-level mobility when controlling for other factors. School size, county population, and median household income had small effects. Regional indicator variables, the presence of a military base, and change in the unemployment rate did not have a statistically significant effect.

“As the percentage of SWD and FRL students increased in a school, the school's churn rate also increased. However, as the percentage of ELL and gifted students increased, the churn rate decreased.”

At the student level, 10.3% of students were classified as mobile during the 2012-13 school year. Regression analysis shows that gifted and ELL students were less likely to be mobile than students not in those subgroups, while FRL students were more likely to be mobile than non-FRL students. The mobility patterns of FRL and non-FRL students were mostly consistent, regardless of student race/ethnicity.

While this study provides information on patterns in student mobility, many questions remain regarding the effects of student mobility. In particular, future studies should examine the relationship between student mobility and academic achievement and whether mobile students are moving to better, worse, or comparable schools.

# Endnotes

1. GOSA analyzed data from the 2010-11 and 2011-12 school years for comparison. Both years exhibited mobility patterns similar to 2012-13, so only 2012-13 is presented in this report.
2. See, for example: Community Research Partners. 2012. "[Student Nomads: Mobility in Ohio's Schools](#)." Research conducted for the Thomas B. Fordham Institute.  
Education Research & Data Center. 2010. "[A First Look at Student Mobility](#)." State of Washington.  
O'Donnell, Robert and Anna Gazos. 2010. "[Student Mobility in Massachusetts](#)." Massachusetts Department of Elementary and Secondary Education.
3. GOSA did not run regressions on school level churn rates in 2010-11 and 2011-12.
4. Community Research Partners. 2012. "[Student Nomads: Mobility in Ohio's Schools](#)." Research conducted for the Thomas B. Fordham Institute.
5. These dates can be found on [GaDOE's website](#) and are as follows: 2010-11: October 5, 2010; 2011-12: October 4, 2011; 2012-13: October 2, 2012. May 1 represents a consistent date that is prior to the end of the school year in all Georgia districts. Students may enter/withdraw on or before May 1.
6. The GaDOE treats all state and commission charter schools as separate districts.
7. Five schools in the dataset were not assigned to a RESA because they serve the entire state of Georgia: Georgia Connections Academy, Atlanta Area School for the Deaf, Georgia School for the Deaf, Provost Academy Georgia, Odyssey School.
8. For ease in presentation, schools with a churn rate of more than 100% were recoded to equal 100%.
9. High poverty and low poverty definitions follow those used by the [National Center of Education Statistics](#). Schools that had between 25% and 75% FRL had a median churn rate of 14.7% (1,162 schools).
10. The Georgia School for the Deaf and the Atlanta Area School for the Deaf were "high poverty" schools but were not assigned a RESA for the purposes of this analysis because they serve the entire state of Georgia. They are included in the All Schools line in the table. The only "low poverty" school in Heart of Georgia RESA was the Dublin City Alternative School.
11. Seven schools had a majority of gifted students: Esther F. Garrison School of Visual and Performing Arts and Savannah Arts Academy in Chatham County; Kittredge Magnet School, Wadsworth Magnet School for High Achievers, DeKalb School of the Arts in DeKalb County; Marietta Center for Advanced Academics in Marietta City; and the Gwinnett School of Mathematics, Science, and Technology in Gwinnett County.
12. For ease in presentation, schools with a churn rate of more than 100% were recoded to equal 100%.
13. White's original heteroskedasticity test rejected the null hypothesis of homoskedasticity. Multicollinearity is not an issue; variance inflation factors of the independent variables range from 1.12 to 5.84.
14. With regard to race/ethnicity, national data also show that Hispanics and African Americans are more mobile than people of other races/ethnicities. Source: Ihrke, David K. and Carol S. Faber. 2012. "[Geographical Mobility: 2005-2010](#)."
15. The data provided contained 190 missing values for percent gifted. GOSA consulted student records to populate these missing values and added values to an additional 92 schools.
16. North equals one for the districts in the Northwest Georgia, Northeast Georgia, North Georgia, and Pioneer RESAs. Metro Atlanta equals one for the districts in the Metro Atlanta RESA. Middle equals one for districts in the West Georgia, Griffin, Middle Georgia, Oconee, and Central Savannah River RESAs. South Georgia includes the districts in the Chattahoochee-Flint, Heart of Georgia, First, Southwest Georgia, Coastal Plains, and Okefenokee RESAs.
17. This analysis uses metropolitan statistical areas, delineated by the Office of Management and Budget, which contain "a large population nucleus and adjacent communities that have a high degree of integration." (Source: *Federal Register*. "[Part IV: Office of Management and Budget: 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas; Notice](#)." June 28, 2010.). To obtain information on the latest delineations, see [OMB Bulletin No. 13-01](#). The military variable equals one for districts in the metropolitan statistical areas that contain Albany Marine Corps Logistics Base, Fort Gordon, Kings Bay Submarine Base, Fort Benning, Fort Stewart, Moody Air Force Base, and Warner-Robins Air Force Base. These districts are: Baker County, Brantley County, Brooks County, Bryan County, Burke County, Chatham County, Chattahoochee County, Columbia County, Dougherty County, Echols County, Effingham County, Glynn County, Harris County, Houston County, Lanier County, Lee County, Lincoln County, Lowndes County, Marion

County, McDuffie County, McIntosh County, Muscogee County, Peach County, Pulaski County, Richmond County, Worth County, and Valdosta City.

18. Seven schools are not associated with one county because they serve students of multiple counties or all the students in Georgia. In these cases, the county-level variables are coded as missing and are thus not included in the regression analysis. These schools are Pataula Charter Academy, Odyssey School, Provost Academy Georgia, Georgia Connections Academy, Atlanta Area School for the Deaf, Georgia School for the Deaf, and the Mountain Education Center School. Source: Bureau of Labor Statistics, [Local Area Unemployment Statistics](#).
19. Source: Ihrke, David K. and Carol S. Faber. 2012. "[Geographical Mobility: 2005-2010](#)." See also: Ihrke, David K., Carol S. Faber, & William K. Koeber. 2011. "[Geographical Mobility: 2008-2009](#)."
20. School size is measured by the number of students enrolled in that school as of October 2, 2012. This is the same number as the churn rate's denominator. Source: Author's calculations.
21. For example, Atlanta Public Schools draws students predominantly from Fulton County but also from DeKalb County. For this analysis, it is associated with Fulton County.
22. Source: Schachter, Jason P., Rachel S. Franklin, & Marc J. Perry. 2003. "[Migration and Geographic Mobility in Metropolitan and Nonmetropolitan America: 1995 to 2000](#)." See also this [Census Bureau graph](#) of historical trends.
23. The school's county population is measured by the 2012 estimate. 2013 data are not available. Source: [US Census Bureau](#).
24. This variable reflects 2011 estimates. 2012 data were not available at the time the analysis was conducted. Source: [US Census Bureau](#).
25. Source: Ihrke, David K. and Carol S. Faber. 2012. "[Geographical Mobility: 2005-2010](#)."
26. See endnote 9 for low and high poverty definitions
27. Because this variable is log transformed, this effect is calculated by multiplying the value of the coefficient by  $\log(1.5)$ .
28. The difference between the percent of the overall population and the percent of the mobile population was statistically significant for all groups, except for Native American students, as determined by one-sample test of proportions ( $p < 0.5$ ).
29. Differences between groups were statistically significant, as determined by Pearson's Chi-Squared ( $p < .05$ ).
30. Differences were statistically significant, as determined by one-sample test of proportions ( $p < .05$ ).
31. Differences between groups were statistically significant, as determined by Pearson's Chi-Squared ( $p < .05$ ).
32. Differences between groups were statistically significant, as determined by Pearson's Chi-Squared ( $p < .05$ ).
33. Differences between groups were statistically significant, as determined by Pearson's Chi-Squared ( $p < .05$ ). Gifted students comprised 11.9% of the population in 2012-13.
34. Differences were statistically significant, as determined by one-sample test of proportions ( $p < .05$ ).
35. Differences between groups were statistically significant, as determined by Pearson's Chi-Squared ( $p < .05$ ).
36. Differences were statistically significant, as determined by one-sample test of proportions ( $p < .05$ ).
37. Using unduplicated data. The student is the unit of observation. Using the definition above, a student is considered mobile if he or she ever moves during the academic year.
38. Substantive effects estimates were derived using the margins package in Stata 12.
39. The likelihood that a student who was gifted and qualified for FRL was mobile is -9.05%. This likelihood decreases if the student was gifted and not qualified for FRL— -12.71%.
40. That is to say that Native American students in the FRL category were 5.0% more likely to be mobile than are Native American students in the non-FRL category, while white and Hispanic students in the FRL category were 3.4% more likely to be mobile than are white students in the non-FRL category.

# Appendix A: District Churn Rates

| District             | 2012-13 Churn Rate |
|----------------------|--------------------|
| Appling County       | 14.5%              |
| Atkinson County      | 16.2%              |
| Bacon County         | 12.8%              |
| Baker County         | 19.9%              |
| Baldwin County       | 12.6%              |

## Appendix C: Schools Dropped from the Regression

GOSA calculated 2012-13 churn rates for 2,271 schools. However, the regression analysis does not include 103 schools due to missing data, mostly on the percent gifted variable. This appendix lists schools dropped from the regression.

| School  | District         |
|---|------------------|
| Baxley Wilderness Institute                           | Appling County   |
