

Georgia Higher Learning and Earnings

David Evans II

April 2018

Executive Summary

By 2025, over 60 percent of jobs in Georgia will likely require some form of college education, whether in the form of a certificate, an associate's degree, or a bachelor's degree. Expected earnings play an important role in the decision to pursue a certain degree or major. Until recently, data regarding college graduates and their earnings were not publicly available in Georgia. The Georgia Higher Learning and Earnings Report presents earnings information for Georgia technical college and college/university graduates who work in Georgia after earning their degrees. The report presents median, 25th percentile, and 75th percentile wages by degree category (certificate, bachelor's, etc.), technical college or college/university, program of study, and whether the student graduated with the HOPE scholarship/grant for the first and fifth year after graduation. In addition, it explores award patterns by gender and race/ethnicity.³

In addition to degree type and program of study, it is important to note that many factors, such as student ability/motivation, college selectivity, and job market conditions affect earnings. The results in this report should not be interpreted as a guarantee of employment or earnings. The report is limited to wage data on graduates who work in Georgia for employers that provide wage data to the Georgia Department of Labor and therefore does not include wages earned in out-of-state jobs, by independent contractors, or by federal or military employees. With this in mind, the results should be seen as one piece of information that students and parents can consider when making program and degree choices.

² GA•AWARDS, the state's longitudinal data system housed at the Governor's Office of Student Achievement, contains data on all graduates from Georgia Military College (GMC), University System of Georgia (USG), and Technical College System of Georgia (TCSG) institutions, as well as information on Georgia public high school graduates for out-of-state colleges/universities from the National Student Clearinghouse. Some, but not all, institutions in the Georgia Independent Colleges Association (GICA) provide data to GA•AWARDS, and those that provide data do not always do so for the entire report period. For the purposes of this report, technical colleges, colleges, and universities are referred to as "colleges." ³ HOPE grants and scholarships and Zell Miller grants and scholarships are defined as HOPE scholarships for the purposes of this report.

¹ For more information regarding this statistic and the Complete College Georgia initiative, please visit http://www.completegeorgia.org/.

Some high-level findings include:

 As students increase their level of education, their wages tend to increase as seen in Figure 1 below. The increase in wages becomes more pronounced with time, following graduation. Possessing any college credential results in higher earnings when compared to high school graduates.⁴

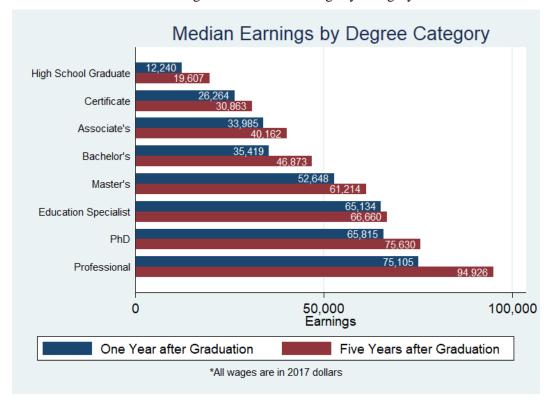

Figure 1: Median Earnings by Category⁵

- Earnings vary dramatically by program of study and college.
- Within program of study and college, wages tend to increase after five years but at varying rates.
- First-year earnings across all degree categories declined during the Great Recession (December 2007 through June 2009). Only the earnings of those holding PhDs returned to 2008 levels by 2016 (in constant dollars).

⁵ For the purposes of this report, high school graduates are defined as individuals who have graduated from a Georgia high school and may have some college, but have never attained an award, and are not enrolled in college one year or five years after graduation.

iii

⁴ Earnings for high school graduates in this report are typically lower than national estimates due to a variety of factors. For example, the Bureau of Labor Statistics (BLS) estimates only include individuals that are 25 years old or older, and working full-time. This report looks at earnings for high school graduates both one year and five years after graduation, regardless of age, and includes only those individuals with 3 or more quarters of wage data within a given year. For more information on the BLS estimates, click here.

- Among the most popular programs of study, health professions and related programs are consistently amongst the top earners relative to other popular degree categories.
- Certificates in engineering technologies and related fields are the highest earning certificates.
- Health professions and related programs mark the highest earning program type for those holding associate's degrees, while engineering and computer & information science degrees are the highest earning programs for those holding bachelor's degrees.
- Degrees in business and related support services earn the most for those holding master's degrees.
- Professional degrees in health professions and related fields have the highest median earnings in this degree category.
- The difference in wages between students graduating with the HOPE scholarship/grant and those who do not is fairly small.

Introduction

By 2025, over 60 percent of jobs in Georgia will likely require some form of college education, whether in the form of a certificate, an associate's degree, or a bachelor's degree. Expected earnings play an important role in the decision to pursue a certain degree or major. Until recently, earnings data were not publicly available in Georgia. The Georgia Higher Learning and Earnings Report presents earnings information for Georgia technical college and college/university graduates who work in Georgia after earning their degrees. It presents median, 25th percentile, and 75th percentile wages by degree category (certificate, bachelor's, etc.), technical college or college/university, program of study, and whether the student graduated with the HOPE scholarship/grant for the first and fifth year after graduation. In addition, it explores award patterns by gender and race/ethnicity.

In addition to degree type and program of study, it is important to note that many factors, such as student ability/motivation, college selectivity, and job market conditions, affect earnings, so the results in this report should not be interpreted as a guarantee of employment or earnings. The report is limited to wage data on graduates who work in Georgia for employers that provide wage data to the Georgia Department of Labor and therefore does not include wages earned in out-of-state jobs, by independent contractors, or by federal or military employees. With this in mind, the results should be seen as one piece of information that students and parents can consider when making major and degree choices.

The report begins with an overview of the data and methodology, followed by information on the certificates and degrees awarded. The next sections analyze earning patterns by degree category, popular programs of study, college, and HOPE status upon graduation. The final section provides a summary of the report.

⁷ GA•AWARDS, the state's longitudinal data system housed at the Governor's Office of Student Achievement, contains data on all graduates from Georgia Military College (GMC), University System of Georgia (USG), and Technical College System of Georgia (TCSG) institutions, as well as information on Georgia public high school graduates for out-of-state colleges/universities from the National Student Clearinghouse. Some, but not all, institutions in the Georgia Independent Colleges Association (GICA) provide data to GA•AWARDS, and those that provide data do not always do so for the entire report period. For the purposes of this report, technical colleges, colleges, and universities are referred to as "colleges." ⁸ HOPE grants and scholarships and Zell Miller grants and scholarships are defined as HOPE scholarships for the purposes of this report.

⁶ For more information regarding this statistic and the Complete College Georgia initiative, please visit http://www.completegeorgia.org/.

Data and Methodology

Data for this report are provided by <u>Georgia's Academic and Workforce Analysis and Research Data System (GA•AWARDS)</u>. GA•AWARDS is the state's Pre-K through workforce (P-20W) longitudinal data system. Student degree and certificate data are provided to GA•AWARDS by the University System of Georgia (USG), Technical College System of Georgia (TCSG), Georgia Independent College Association (GICA), Georgia Military College (GMC), and the National Student Clearinghouse (NSC). The Georgia Department of Labor (GaDOL) provides wage data to GA•AWARDS, and the Georgia Student Finance Commission (GSFC) provides financial aid data.

This report includes information on students who obtained degrees and certificates between 2007 and 2015. Students graduating from a Georgia college and those graduating from a Georgia high school who subsequently graduated from an out-of-state college between the years of 2007 and 2015 are included in the report. ¹⁰

Wages are reported for the calendar year following graduation and for five years after the graduating year. ¹¹ For example, if a student graduated in May 2007, one-year and five-year wages are reported for January-December of 2008 and 2012, respectively. If a student is enrolled in college during a wage reporting year, those wages are not included in the data to reduce the number of part-time wages reported. ¹² Individuals must have at least three quarters of wage data to be included in the report. For those that only have three quarters of data, the fourth quarter of data is imputed. ¹³ All wage data are reported in 2017 dollars. ¹⁴

If a person receives more than one degree, wages from the first degree are reported until he/she enrolls to obtain the subsequent degree. For example, if a

¹⁴ To convert to 2017 dollars, the 2017 Consumer Price Index (CPI) is divided by the CPI from previous years and then multiplied by the dollar amount needing conversion in accordance with the method described by the Bureau of Labor Statistics.

⁹ For presentation purposes, this report lists academic years as the year in which the academic year ends. For example, the 2006-2007 year is represented as 2007.

¹⁰ GA•AWARDS contains data on all graduates from GMC, USG, and TCSG institutions and information on Georgia public high school graduates from the National Student Clearinghouse. Some, but not all, GICA institutions provide data to GA•AWARDS, and those that provide data do not always do so for the entire report period. GOSA does not report on groups with fewer than ten observations.

¹¹ For students with multiple degrees in a given year, wages are attributed to all degrees awarded to a student in that year. For example, if a student received an associate's and a certificate in the same year, wages for the following year are reported for both credentials.

¹² Not including students who are enrolled also removes students who were working full-time while enrolled. The wage data does not include the number of hours worked, so there is no way to differentiate between students who are working part-time and those working full-time.

¹³ The following method is used to impute missing wage data:

[•] If the individual has three quarters of wages, the sum of these wages is multiplied by 4/3 to get the annualized wage.

[•] If the individual has two quarters of wages or less, the wages are removed.

person obtains a bachelor's degree in 2008, works during 2009 and 2010, and then starts and completes a master's degree in 2011, her wages are counted for her bachelor's degree in 2009 (one year after graduation) and for their master's degree in 2012 (one year after graduation).

Degrees and certificates are divided into the following degree categories: certificates, associate's, bachelor's, master's, education specialists, PhDs, and professional degrees. Professional degrees are terminal degrees geared toward preparing individuals for a particular profession with an emphasis on practice. Examples include law degrees, medical degrees, and education doctorates. PhDs are terminal degrees with an emphasis on research. Programs of study are identified using the Integrated Postsecondary Education Data System's (IPEDS) Classification of Instructional Programs (CIP) codes. For more information, please see Appendix A.

For the purposes of this report, all degrees and certificates are referred to as "awards," and all technical colleges, colleges, and universities are referred to as "colleges."

Patterns in Degree Attainment

From 2007 through 2011, certificates were the most popular award earned in Georgia, followed by bachelor's degrees, as seen in the figure below. In 2012, certificates declined by a significant amount after a surge in 2011. Between these two academic years, TCSG merged several institutions and switched from quarter to semester hours. In anticipation of these changes, many students completed their awards in 2011 rather than waiting until the next academic year, thereby inflating the 2011 results and reducing the 2012 counts. Although both award types are near convergence in 2015, bachelor's degrees surpassed certificates as the most frequently earned award in 2012, and have remained the most popular award through 2015. Bachelor's degrees and certificates are the top two most frequently obtained awards in the state by a large margin.

Associate's and master's degrees were the third and fourth most frequently awarded degrees, respectively, and exhibited similar trends. The advanced degree categories (education specialist, PhDs, and professional degrees) had the lowest counts during this time.

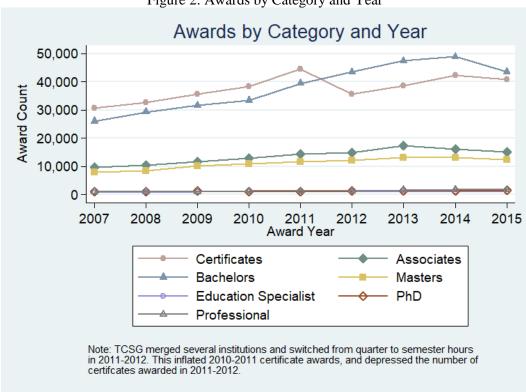

Figure 2: Awards by Category and Year

Figure 3 offers a closer look at the trends for the advanced degrees beyond master's degrees. There was a sizeable jump in the number of professional degrees awarded in 2013. Mercer University began reporting data to GA•AWARDS in 2013, which accounts for most of the increase in professional degrees during that academic year and after. No single college accounts for the volatility in the education specialist category throughout the period.

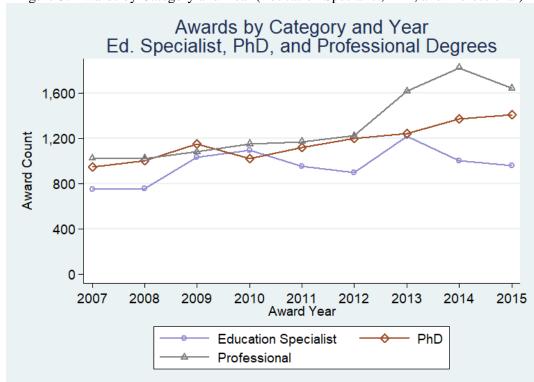

Figure 3: Awards by Category and Year (Education Specialist, PhD, and Professional)

¹⁵ Before 2013, GA•AWARDS obtained information on awards from Mercer only for those students who graduated from a Georgia public high school. From 2013 forward, GA•AWARDS received information for all Mercer graduates.

Figure 4 shows the percentage of undergraduates who went on to earn additional degrees between 2007 and 2015. Students whose first awards were certificates or associate's degrees were most likely to earn additional degrees (23.6% and 27.1%, respectively).

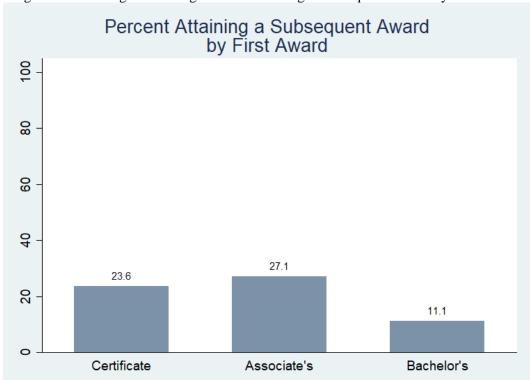

Figure 4: Percentage of Undergraduates Attaining a Subsequent Award by First Award

¹⁶ This is calculated as the total number of students obtaining an award(s) after their first award(s) by category, divided by the total number of students who obtain their first award in each category. If a student obtains more than one degree in the first year, they are counted in both categories. For example, if a student obtains both a certificate and an associate's in 2007 and a bachelor's in 2010, they are counted in both the numerator and denominator for the certificates and associate's category. For students who obtain more than two degrees, this calculation only takes into consideration their first and most recent degrees. For example, if a student obtains a certificate in 2007, an associate's in 2008, and a bachelor's in 2010, they are counted in the numerator and denominator for certificates but not for associate's or bachelor's.

Figure 5 shows the percentage of awards completed by students in traditionally underrepresented race/ethnicity groups.¹⁷ This percentage includes black and Hispanic students, as well as students in the multiple/other category. The top bar contains the percentage of Georgia's statewide population who belong to traditionally underrepresented race/ethnicity groups as of July 1, 2016. The remaining bars represent the percentage of graduates in traditionally underrepresented groups by degree type. The percentage of certificate holders who are in traditionally underrepresented race/ethnicity categories is similar to the For all other degree categories, the percentage of statewide percentage. traditionally underrepresented students with awards is significantly lower than the percentage of traditionally underrepresented residents in the state, especially in the PhD and Professional categories. More information regarding degree attainment by category and race/ethnicity can be found in Appendix E.

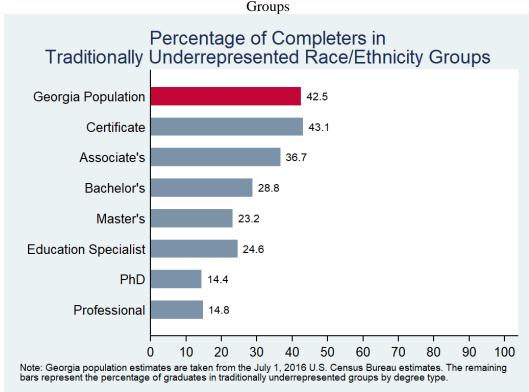

Figure 5: Percentage of Completers in Traditionally Underrepresented Race/Ethnicity

¹⁸ The State of Georgia estimates are calculated using the July 1, 2016 estimates from the U.S. Census Bureau. The calculation is performed as follows: 100 - (% White alone, not Hispanic or Latino + % Asian alone). For more data from the Census Bureau, visit http://www.census.gov/quickfacts/table/PST045215/13.

¹⁷ For the purposes of this report, students of Hispanic ethnicity are treated as their own race/ethnicity category. Due to the small number of observations, the "American Indian or Native Alaskan", "Native Hawaiian or Other Pacific Islander", and "Two or More Races" race/ethnicity categories are combined into the Multiple/Other category.

Figure 6 displays the percentage breakdown of male and female award recipients by degree category from 2007-2015. In every degree category except PhD's, females comprised a larger proportion of students receiving the award.

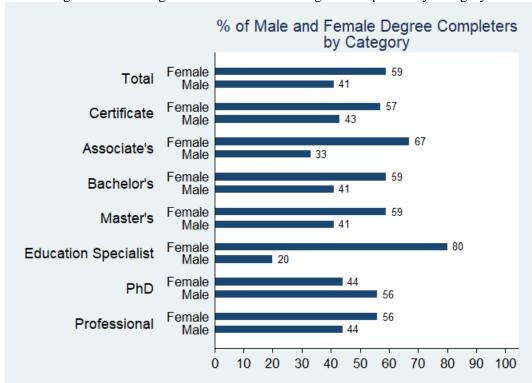

Figure 6: Percentage of Male and Female Degree Completers by Category

As seen in the next two figures, many of the most popular awards for women are in the health, education, and business fields, while many of the most popular awards for men are in business, engineering, and computer science fields.¹⁹

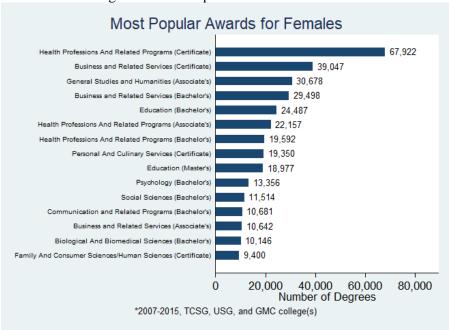

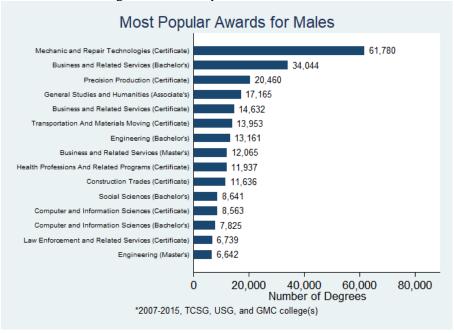

Figure 7: Most Popular Awards for Females

¹⁹ Some CIP titles have been shortened due to graph size. See appendix to see a list of CIP title abbreviations and their original CIP titles.

Matching Award Completers with Wage Data

The wage data include only graduates employed within the state of Georgia by employers that provide wage information to the Georgia Department of Labor for unemployment insurance purposes. Not included in the data are out-of-state wages, self-employed individuals, federal employees, and military employees. When the wage data are matched with the award completers, roughly 61% of college graduates are found within the wage data the year after graduation, and 54% are found in the wage data five years after graduation. These percentages vary by degree category, college, and program of study. As a result, Appendix E contains the percentage of award completers found in the wage data whenever earnings are reported. However, if the percentage is less than 60%, it is noted in the footnote. It is important to note that a low percentage does not mean that individuals are unable to find jobs, but rather that these individuals may be working in jobs that do not report wages to the Georgia Department of Labor or that are out of state.

Higher Degrees, Higher Earnings

According to <u>Complete College Georgia</u>, "by 2025, it is projected that over 60 percent of jobs in Georgia will require some form of a college education, whether a certificate, associate's degree, or bachelor's degree." This report serves to provide a more complete picture of the earning potential of these degrees. In general, higher awards increase an individual's earning potential.

The following analysis uses percentiles to display a range of wages both one year and five years after the student obtains an award. A percentile indicates the percentage of students that fall below a given percentage. For example, earnings reported at the 25th percentile would indicate that those earnings are higher than 25 percent of the earnings in the dataset. The median (50th percentile) exhibits the value of earnings in the middle of the earnings for a given award. Note that all of these percentiles are based on the wages of the individuals in the data as described above, not of the statewide labor force.

The figure on the following page shows the earnings by degree category one year after graduation. Associate's and bachelor's degrees had median earnings around \$35,000. However, as seen in the next section, earnings vary widely by programs of study for both degrees. Wages increased noticeably for graduate degrees. With the exception of the education specialist category, each degree category exhibits large variation within the interquartile range (25th to 75th percentile). Table 1 shows the difference between the 75th and 25th percentiles. It

²¹ For more information regarding Complete College Georgia, please visit http://www.completegeorgia.org/.

²⁰ The denominator for these rates includes only graduates who are eligible to be in the numerator. Graduates who were enrolled during that year are not included.

is important to note that the percentage of PhD graduates matched in the wage data is substantially lower than the other degree types. PhDs often compete in a national job market and move out of state for employment.

Figure 9: Range of Earnings by Category One Year after Graduation²²

Table 1: Range of Earnings One Year after Graduation

Category	25th Percentile One Year after Graduation	Median Earnings One Year after Graduation	75th Percentile One Year after Graduation	Difference between 75th Percentile and 25th Percentile
Certificate	\$17,242	\$26,264	\$37,286	+\$20,044
Associate's	\$21,727	\$33,985	\$49,438	+\$27,711
Bachelor's	\$23,645	\$35,419	\$48,310	+\$24,665
Master's	\$41,201	\$52,648	\$71,200	+\$29,999
Education Specialist	\$57,356	\$65,134	\$73,721	+\$16,365
PhD	\$45,382	\$65,815	\$87,159	+\$41,777
Professional	\$54,829	\$75,105	\$110,202	+\$55,373

²² Only certificates, associate's, and education specialists had greater than 60% of graduates matched within the wage data. The match rate for PhDs is substantially lower than all other degree types at 28%.

The differences in earnings among the degree categories becomes more pronounced when examining wages five years after graduation, as seen in the figure and table below. Education specialists exhibited the smallest percentage change in wages after five years. Bachelor's degrees had a much higher percentage increase in earnings from the first to the fifth year after graduation.²³

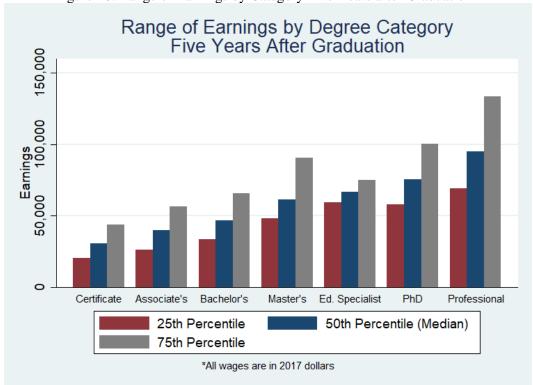

Figure 10: Range of Earnings by Category Five Years after Graduation²⁴

Table 2: Range of Earnings Five Years after Graduation

Category	25th Percentile Five Years after Graduation	Median Earnings Five Years after Graduation	75th Percentile Five Years after Graduation	Difference between 75th Percentile and 25th Percentile
Certificate	\$20,440	\$30,863	\$44,002	+\$23,562
Associate's	\$26,358	\$40,162	\$56,403	+\$30,045
Bachelor's	\$33,809	\$46,873	\$65,590	+\$31,781
Master's	\$48,245	\$61,214	\$90,797	+\$42,552
Education Specialist	\$59,568	\$66,660	\$74,807	+\$15,239
PhD	\$57,935	\$75,630	\$100,525	+\$42,590
Professional	\$69,086	\$94,926	\$133,174	+\$64,088

²³ It is important to note that the individuals represented in the wage data change over time; the same individuals whose earnings are represented one year after graduation are not necessarily the same ones represented five years after graduation.

²⁴ Only associate's and education specialists had greater than 60% of graduates matched within the wage data. The match rate for PhDs is substantially lower than all other degree types at 22%.

Table 3: Percentage Change in Earnings from One to Five Years after Graduation

	25th Percentile % Change in	Median % Change in	75th Percentile % Change in
Category	Earnings after Five Years	Earnings after Five Years	Earnings after Five Years
Certificate	19%	18%	18%
Associate's	21%	18%	14%
Bachelor's	43%	32%	36%
Master's	17%	16%	28%
Education Specialist	4%	2%	1%
PhD	28%	15%	15%
Professional	26%	26%	21%

Earning Trends over Time: Wages Still Below Pre-Recession Levels

The Federal Reserve officially designates the Great Recession December 2007 – June 2009.²⁵ All award categories experienced a decline in first year wages during some period of the recession, particularly in the 2009-2010 academic year. Wage recovery began in different years across the degree categories, and in some cases, after a period of growth, flattened or declined. Most notably from 2008 to 2016, no award category at the 25th or 50th percentile experienced a net total gain in earnings; both bachelor's and master's degrees experienced a net gain in the 75th percentile.

The figures below display the 25th, 50th, and 75th percentiles of wages over time and by degree category in blue, red, and green, respectively.²⁶ Appendix C shows the percentage change in wages from the prior year.

Figure 11: First-Year Earnings for Certificates over Time

²⁶ Information for PhDs is not represented here due to low match rates within the wage data.

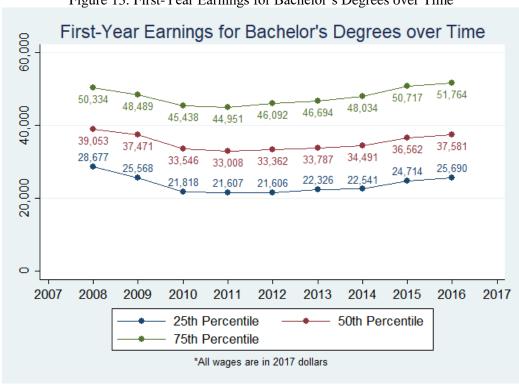

²⁵ More information regarding the 2007-2009 recession can be found here: http://www.federalreservehistory.org/Events/DetailView/58.

Figure 12: First-Year Earnings for Associate's Degrees over Time

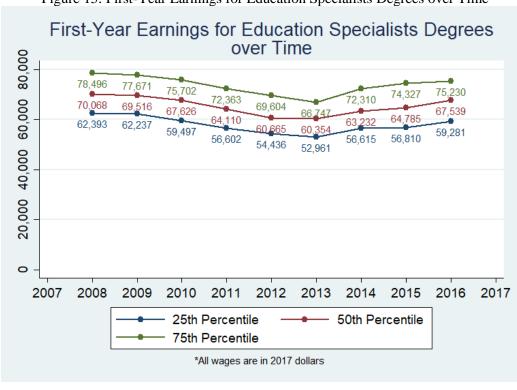

²⁷ For 2011-2015, the percentage of graduates matched in the wage data is less than 60%.

Figure 14: First-Year Earnings for Master's Degrees over Time²⁸

²⁸ For 2013-2016, the percentage of graduates matched in the wage data is less than 60%.

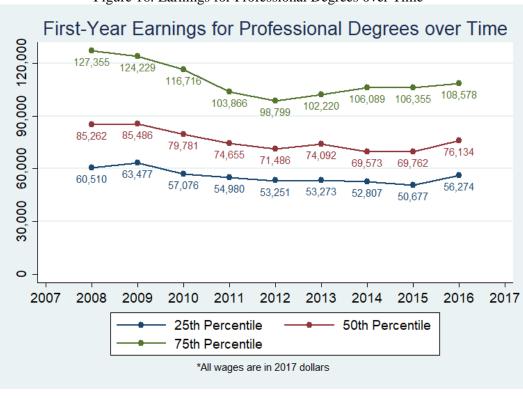

Figure 16: Earnings for Professional Degrees over Time²⁹

Earning Patterns by Most Popular Programs

Earnings vary significantly between the ten most popular degree programs within each award type. The following graphs display earnings for the most popular programs within each category one year and five years after graduation. ³⁰ Earnings are stacked horizontally in blue and red categories representing the first-year and fifth-year earnings, respectively. ³¹

Health professions and related programs tend to be the highest earning programs across most degree categories. In the bachelor's and master's categories, business related degrees earned higher wages than most other popular degrees.

Earning patterns for the top five programs of study hold up over time; those degrees that are the highest earners in the year following graduation were also the high earners five years after graduation. Professional degrees in education are an exception, however. Although EdDs show the highest returns after one year, they

³¹ Some CIP titles have been shortened due to graph size. See appendix to see a list of CIP title abbreviations and their original CIP titles.

²⁹ For all years, the percentage of graduates matched in the wage data is less than 60%.

³⁰ Education specialists are not displayed here since there is little variation in the program of study within this degree category. PhDs are not displayed here due to low match percentages within the data.

demonstrate little growth five years later when they are surpassed by health and legal professions. 32

Figure 17: Earnings by Most Popular Certificates³³

³³ Personal and culinary services and business and related services had match rates less than 60% after one year. Only health professions and related programs had a match rate greater than 60% after five years.

³² Upon graduation, doctors must still complete a residency program and experience lower salaries their first few years removed from medical school because of this. The jump in rankings after five years of employment may be partly attributed to this fact.

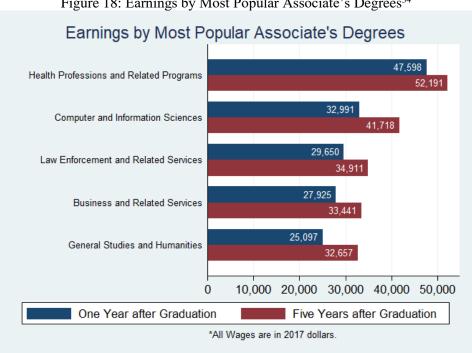

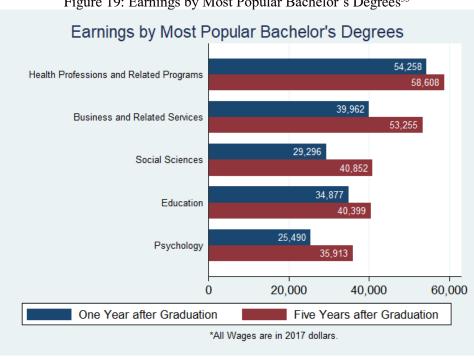

Figure 18: Earnings by Most Popular Associate's Degrees³⁴

³⁵ Psychology and social sciences had a match rate less than 60%. Only health professions and related programs had a match rate greater than 60% after five years.

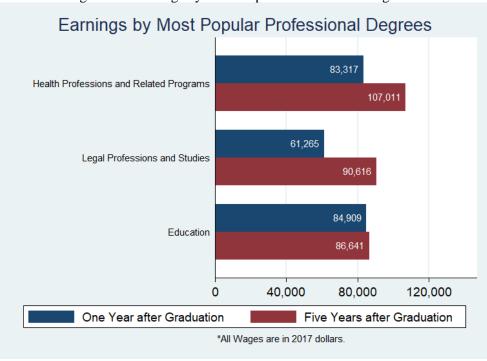

³⁴ General studies and humanities had a match rate less than 60% one year and five years after graduation.

Figure 20: Earnings by Most Popular Master's Degrees³⁶

 $^{^{36}}$ Computer and information sciences had a match rate less than 60%. No programs had match rates greater than 60% five years after graduation.

³⁷ Health professions and related programs had a match rate less than 60% one year and five years after graduation.

tha 37

Highest Earning Programs

This section highlights the top earning programs by median earnings five years after graduation.³⁸ Note that these are the top earning programs based on the available data, not the statewide population. The following graphs display the median earnings for these programs within each category one year and five years after graduation.³⁹ The percentage of graduates matched in the wage data can be found in Appendix E.⁴⁰

Engineering, health, and computer science degrees have high earnings across the most degree types.

Figure 22: Highest Earning Certificates⁴¹

⁴¹ Only construction trades had a match rate greater than 60% five years after graduation.

³⁸ Program groupings are determined by two-digit CIP codes. Programs with fewer than 200 graduates in the wage data five years after graduation are dropped.

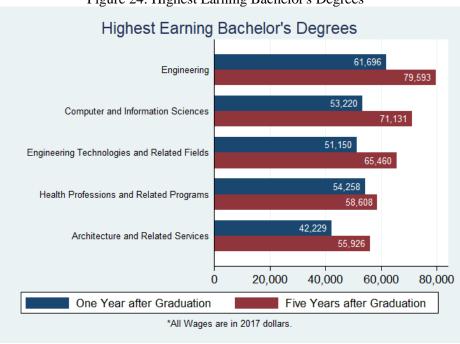

³⁹ Education specialists are not displayed here since there is little variation in the program of study within this degree category. PhDs are not displayed here since fewer than 60% of all the most popular PhDs are matched with the wage data.

⁴⁰ Some CIP titles have been shortened due to graph size. See appendix to see a list of CIP title abbreviations and their original CIP titles.

Figure 23: Highest Earning Associate's Degrees⁴²

after graduation.

Computer and information sciences, architecture and related services, and social sciences did not have match rates greater the 60% after one year. No program had a match rate greater than 60% after five years.
 Only health professions and related programs had a match rate less than 60% one year and five years

Earnings by Institution

Earnings same degrees also differ between Georgia the colleges/universities. 46 The figures in this section show median wages by degree category and institution.⁴⁷ These figures are meant to provide a high-level overview of patterns but do not take into account other factors that affect earning potential, such as incoming student characteristics, admissions policies, labor market conditions, or the degree programs offered within each award type. For example, colleges with graduates earning higher salaries may have more selective admissions criteria for students, which may translate into higher earnings after graduation. Or, colleges offering degree programs that traditionally earn higher salaries, such as engineering or business degrees, will have higher earnings. Given this context, the information presented here should be used for informational purposes but should not be used to assign rank or value to a degree from a particular college.

Although there is some shuffling in earnings by colleges one year and five years after graduation, earnings tend to increase after five years across all colleges. Due to the large number of colleges offering certificates and associate degrees, the figures for these degree categories are split by TCSG and USG institutions. Only USG institutions offer bachelor's degrees and above.⁴⁸

Note that some colleges listed below have merged with other colleges since 2007. The earnings information presented below reflects the name of the merged institution. For example, Coosa Valley and Northwestern Technical Colleges merged in July 2009 to become the new Georgia Northwestern Technical College. Earnings for 2007-2009 graduates of Coosa Valley and Northwestern Technical College are listed under Georgia Northwestern Technical College. For a full list of mergers, please see Appendix F.

⁴⁸ PhDs are not displayed here because the match rates for these degrees are substantially lower than other degree types.

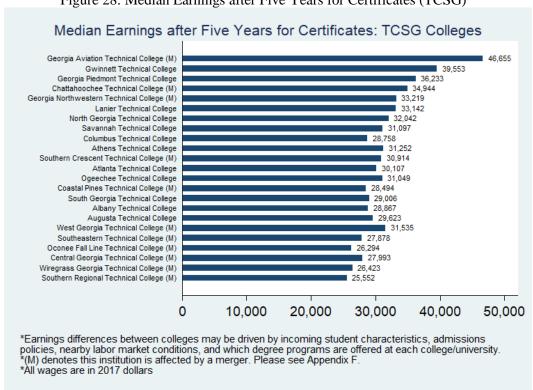

⁴⁶ Because GA•AWARDS contains all awards from TCSG and USG institutions for all years, only TCSG and USG institutions are displayed here.

⁴⁷ Colleges must have at least 20 students in the wage data for the first and fifth year after graduation to be included in the figures below.

Median Earnings after One Year for Certificates: TCSG Colleges Georgia Aviation Technical College (M) Gwinnett Technical College 31.741 Georgia Piedmont Technical College 29,739 Chattahoochee Technical College (M) 29,543 Georgia Northwestern Technical College (M) 27.876 Lanier Technical College 27,440 North Georgia Technical College 26.528 Savannah Technical College 26,455 Columbus Technical College 26,412 Athens Technical College 26,147 Southern Crescent Technical College (M) 26,046 Atlanta Technical College 25 585 Ogeechee Technical College 25,563 Coastal Pines Technical College (M) 25,137 South Georgia Technical College 25,129 Albany Technical College 25,063 Augusta Technical College 24,910 West Georgia Technical College (M) 24.794 Southeastern Technical College (M) 24 254 Oconee Fall Line Technical College (M) 23,441 Central Georgia Technical College (M) 23,046 Wiregrass Georgia Technical College (M) 23,023 Southern Regional Technical College (M) 21,871 50,000 0 10,000 20,000 30,000 40,000 *Earnings differences between colleges may be driven by incoming student characteristics, admissions policies, nearby labor market conditions, and which degree programs are offered at each college/university *(M) denotes this institution is affected by a merger. The next set of graphs show median wages by college for the three most popular programs of study across the state: business, computer information sciences (CIS), and health professions.⁶³ Comparable to findings presented above, earnings differ by college and degree category, but variation also exists within program of study. After five years, most programs experienced an increase in earnings. However, the amount of the increase differs among colleges. Earnings by college for all degree types and programs of study are available on the Higher Learning and Earnings Dashboard (http://learnearn.gosa.ga.gov).⁶⁴

⁶⁴ Some CIP titles have been shortened due to graph size. See appendix to see a list of CIP title abbreviations and their original CIP titles.

⁶³ Only undergraduate programs are shown on the following pages because colleges specialize more in graduate degree categories, leading to less comparability between programs and institutions. Only majors that have at least 20 observations in the wage data one year and five years after graduation are included. Programs meeting these requirements are then chosen based on the number of awards conferred.

Median Earnings after One Year: Business Certificate* Gwinnett Technical College Chattahoochee Technical College (M) Lanier Technical College 28.947 Columbus Technical College 28,779 Georgia Piedmont Technical College Savannah Technical College 28.530 25.944 25,569 25,428 Southern Crescent Technical College (M) Georgia Northwestern Technical College (M) Dalton State College 24,708 Albany Technical College 24.508 West Georgia Technical College (M) Atlanta Technical College 23,722 23,666 Ogeechee Technical College 23,020 North Georgia Technical College Southeastern Technical College (M) 22.904 South Georgia Technical College Athens Technical College 21 793 21,424 Wiregrass Georgia Technical College (M) Augusta Technical College 21,315 21,292 Bainbridge State College 20,886 20,718 Oconee Fall Line Technical College (M) Coastal Pines Technical College (M) Southern Regional Technical College (M) 20,393 20.017 Central Georgia Technical College (M) 0 20,000 40.000 *Earnings differences between colleges may be driven by incoming student characteristics, admissions policies, nearby labor market conditions, and which degree programs are offered at each college/university. *(M) denotes this institution is affected by a merger. Earnings for HOPE Graduates

The HOPE Scholarship/Grant is a grant/scholarship program originating in 1993 under Governor Zell Miller. The program offers funding assistance to postsecondary-bound high school students meeting the required academic qualifications upon graduation from high school. For this report, undergraduate students who have surpassed the allotted amount of credit hours eligible under the program criteria (127 hours) or maintained their scholarships through their graduation years are defined as HOPE graduates. Due to data limitations, this section analyzes only students who received awards in 2012-2015 from colleges located in Georgia and were considered eligible to receive HOPE in high school. High school HOPE eligibility data are only available starting in 2007, so high school graduates prior to that year are not included in this analysis.

As shown in Figure 63, HOPE graduates earned roughly 69% of certificates and 56% of bachelor's awards from 2012 to 2015 but only 42% of associate's.

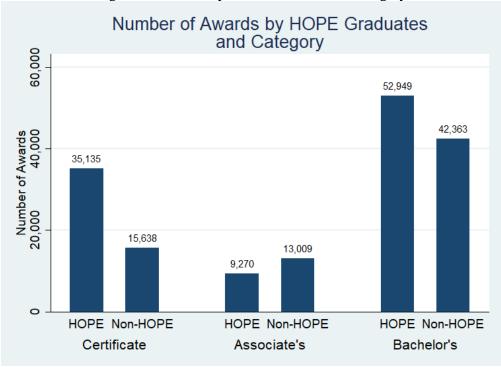

Figure 63: Awards by HOPE Graduate and Category

⁸⁵ Undergraduates are defined as students who have held a certificate, associate's, and/or bachelor's degree. ⁸⁶ To identify those who were eligible to receive HOPE, this report used only students who had a HOPE GPA from high school and received an award from a college in Georgia. GA•AWARDS began receiving these data with the high school graduating class of 2007. Therefore, this analysis is limited to students who receive their degrees in 2012 and after to ensure that GA•AWARDS received the HOPE GPA from high school for most of the students who were eligible to receive HOPE.

⁸³ HOPE grants and scholarships and Zell Miller grants and scholarships are defined as HOPE scholarships for the purposes of this report.

⁸⁴ More information on the HOPE program can be found online here: https://gsfc.georgia.gov/hope.

Overall, HOPE graduate earnings are similar for graduates with certificates and bachelor's degrees. Although HOPE graduates holding a bachlor's degree earned \$2,316 more than those without HOPE, HOPE graduates with certificates earned \$1,559 less than non-HOPE graduates one year after graduation. For graduates with associate's, the median earnings for HOPE graduates were \$5,492 higher one year after graduation than non-HOPE graduates.

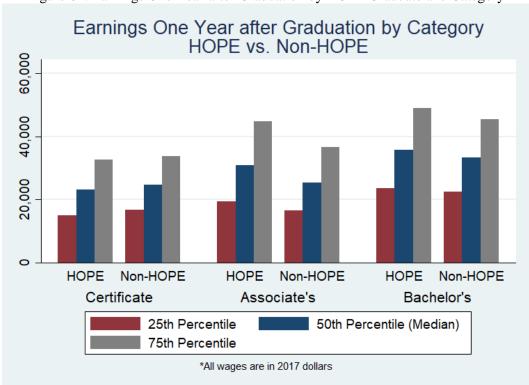

Figure 64: Earnings One Year after Graduation by HOPE Graduate and Category

Summary

Expected earnings are one of many factors students and parents should consider when selecting degrees to pursue. Prior to this report, earnings of recent graduates who are working in Georgia were not available. This report presents earnings patterns for degree types and colleges one and five years after graduation.

In general, wages tend to increase as students earn higher degrees. However, there is a large amount of variation within program of study and college. Regardless of degree type, first-year wages declined in conjunction with the Great Recession and had not returned to 2008 levels as of 2016 (in constant dollars).

It should be noted that the report does not take into account how other factors, such as student ability/motivation, college selectivity, and job market conditions, affect earnings. The results presented in this report should not be should not be interpreted as causative. Recognizing the limits of the data, the information provided in this report offers another tool to guide education stakeholders in making decisions related to postsecondary choices. In conjunction with this report, GOSA has published an interactive dashboard using the same data used for this report for stakeholders to dig deeper into earnings patterns by program of study and award type (http://learnearn.gosa.ga.gov).

Appendix A: Degree Categories

USG	F	Advanced Certificate	Dropped (category too heterogeneous to classify)

^{*}Degree descriptions appear as they are reported to GA•AWARDS, except for code 8 for the Georgia Independent Colleges Association (GICA), which has been changed slightly.

Appendix B: Race/Ethnicity Data

Of total awards granted, the majority are obtained by white students (see Figure 65 below). Black students obtain the second highest quantity of awards, followed by students in the Asian, Hispanic, and Multiple/Other categories, respectively.

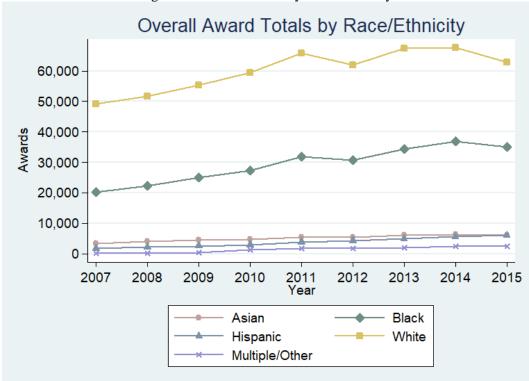

Figure 65: Award Totals by Race/Ethnicity

The figures on the following pages display the total number of awards by race/ethnicity and degree category. There are several notable trends over time and by category. Note that these trends do not account for the race/ethnicity percentages in the statewide population, but rather show the counts of awards obtained. The graphs below show that white students obtain more awards in every degree category, but the gap between white and black students closes slightly in the certificate and associate's categories. The total count of Asian, Hispanic, and Multiple/Other races/ethnicities appears low for all degree categories, with the exception of PhDs. Asian students obtain the second highest number of degrees in this category.

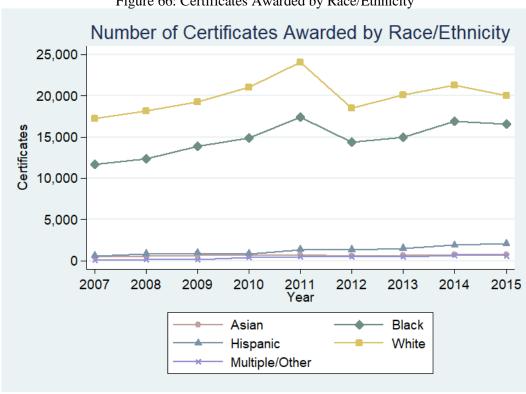

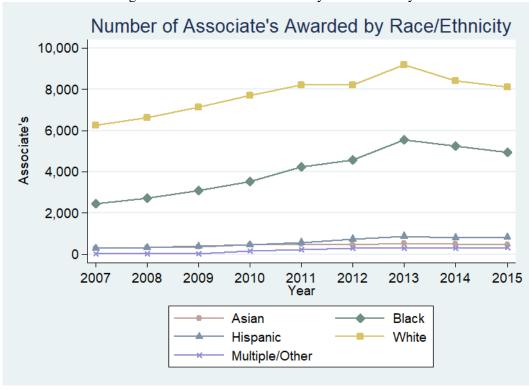

Figure 66: Certificates Awarded by Race/Ethnicity

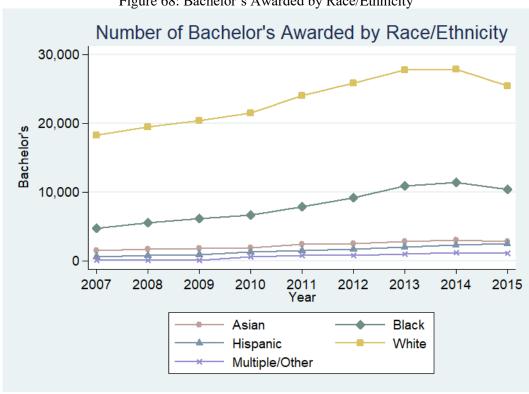

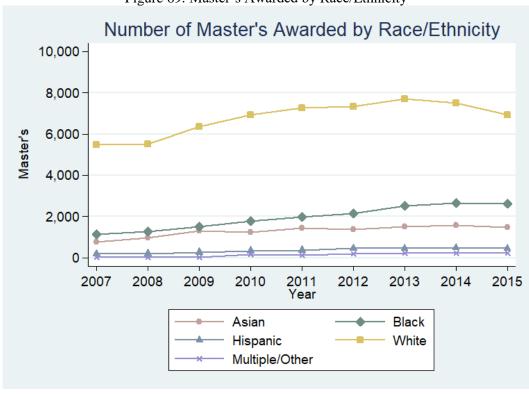

Figure 68: Bachelor's Awarded by Race/Ethnicity

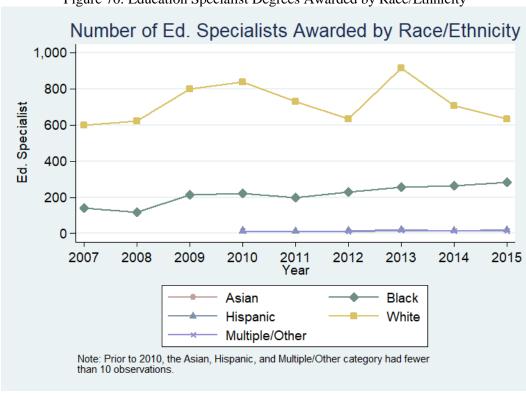

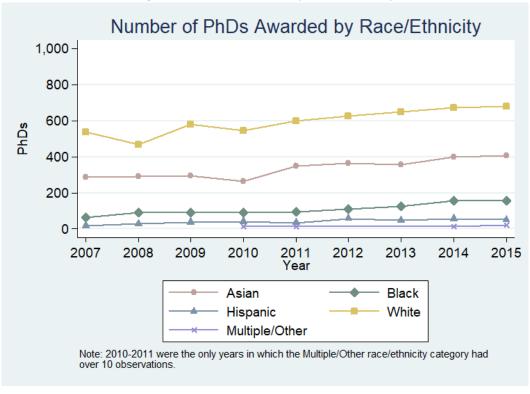

Figure 70: Education Specialist Degrees Awarded by Race/Ethnicity

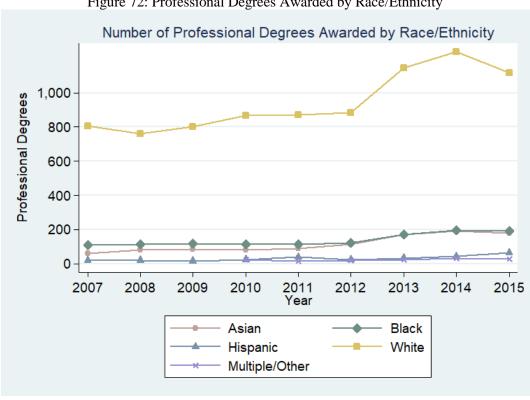

Figure 72: Professional Degrees Awarded by Race/Ethnicity

Appendix C: Effects of the Great Recession

This table shows the percentage change in one-year wages for each category for the years of available data. The cells shaded red highlight negative percentage changes. Although bachelor's and master's degrees show net gains in the 75th percentile, PhDs are the only category that demonstrate a net gain over the period in every percentile.
